

The background of the cover is a photograph of a shallow stream. The water is a deep, murky reddish-brown color, suggesting the presence of iron or other minerals. It flows over a bed of various sized rocks, some of which are covered in green moss or algae. The lighting is natural, creating highlights and shadows on the water and rocks.

Contaminant Hydrogeology Edition C W Fetter:

Contaminant Hydrogeology C. W. Fetter, Thomas Boving, David Kreamer, 2017-10-24 Tremendous progress has been made in the field of remediation technologies since the second edition of *Contaminant Hydrogeology* was published two decades ago and its content is more important than ever. Recognizing the extensive advancement and research taking place around the world, the authors have embraced and worked from a larger global perspective. Boving and Kreamer incorporate environmental innovation in studying and treating groundwater soil contamination and the transport of those contaminants while building on Fetter's original foundational work. Thoroughly updated, expanded, and reorganized, the new edition presents a wealth of new material including new discussions of emerging and potential contaminant sources and their characteristics like deep well injection, fracking fluids, and in situ leach mining. New sections cover BET and Polanyi adsorption, potential theory, vapor transport theory, the introduction of the Capillary and Bond Numbers, the partitioning interwell tracer testing technique for investigating NAPL sites, aerial photographic interpretation, geophysics, immunological surveys, high resolution vertical sampling, flexible liner systems, groundwater tracers, and much more. *Contaminant Hydrogeology* is intended as a textbook in upper level courses in mass transport and contaminant hydrogeology and remains a valuable resource for professionals in both the public and private sectors.

The Water Environment of Cities Lawrence A. Baker, 2009-04-21 The concept for *The Water Environment of Cities* arose from a workshop, Green 1 Cities Blue Waters, workshop held in 2006. The workshop assembled experts from engineering, planning, economics, law, hydrology, aquatic ecology, geomorphology, and other disciplines to present research findings and identify key new ideas on the urban water environment. At a lunch discussion near the end of the workshop, several of us came to the recognition that despite having considerable expertise in a narrow discipline, none of us had a vision of the urban water environment as a whole. We were as in the parable blind men at opposite ends of the elephant, knowing a great deal about the parts but not understanding the whole. We quickly recognized the need to develop a book that would integrate this knowledge to create this vision. The goal was to develop a book that could be used to teach a complete multidisciplinary course, *The Urban Water Environment*, but could also be used as a supplemental text for courses on urban ecosystems, urban design, landscape architecture, water policy, water quality management, and watershed management. The book is also valuable as a reference source for water professionals stepping outside their arena of disciplinary expertise. *The Water Environment of Cities* is the first book to use a holistic interdisciplinary approach to examine the urban water environment. We have attempted to portray a holistic vision built around the concept of water as a core element of cities. Water has multiple roles: municipal water supply, aquatic habitat, landscape aesthetics, and recreation. Increasingly, urban water is reused, serving multiple purposes.
