Information Hiding David Aucsmith, 2003-05-20 The mid 1990s saw an exciting convergence of a number of different information protection technologies whose theme was the hiding as opposed to encryption of information Copyright marking schemes are about hiding either copyright notices or individual serial numbers imperceptibly in digital audio and video as a component in intellectual property protection systems anonymous communication is another area of rapid growth with people designing systems for electronic cash digital elections and privacy in mobile communications security researchers are also interested in stray communication channels such as those which arise via shared resources in operating systems or the physical leakage of information through radio frequency emissions and naturally many workers in these fields drew inspiration from classical hidden communication methods such as steganography and spread spectrum radio The first international workshop

on this new emergent discipline of information hiding was organised by Ross Anderson and held at the Isaac Newton Institute Cambridge from the 30th May to the 1st June 1996 and was judged by attendees to be a successful and significant event. In addition to a number of research papers we had invited talks from David Kahn on the history of steganography and from Gus Simmons on the history of subliminal channels. We also had a number of discussion sessions culminating in a series of votes on common terms and definitions. These papers and talks together with minutes of the discussion can be found in the proceedings which are published in this series as Volume 1174. **Books in Series**, 1985 Vols for 1980 issued in three parts.
