Swallowing - Physiology, Disorders, Diagnosis and Therapy Gauri Mankekar, 2015-05-23 Swallowing difficulty or dysphagia is a common disorder and affects all age groups from the newborn to the elderly. Several medical conditions like lack of dentition, gastroesophageal reflux disease, eosinophilic esophagitis, cardiomegaly, and strokes can cause dysphagia. It can also follow head/neck surgeries. It is important to diagnose and treat dysphagia; otherwise, it can lead to malnutrition and dehydration. Improved understanding of the physiology of swallowing, advances in endoscopic and radiological techniques, along with an increasing elderly population, has resulted in development of a separate swallowing disorders discipline. This book would be an aid for clinicians, educators, and trainees from the fields of speech language pathology, pediatrics, otolaryngology, gastroenterology, oncology, neurology, geriatrics, and rehabilitation, all of whom form a part of the multidisciplinary swallowing team.
