as British English are characterized as being stress timed While previous studies mostly relied on a single acoustic correlate of speech rhythm usually duration the author proposes a multidimensional approach to the production of speech rhythm that takes into account various acoustic correlates The results reveal that the two varieties differ with regard to a number of dimensions such as duration sonority intensity loudness pitch and glottal stop insertion The second part of the study addresses the question whether the difference in speech rhythm between Indian and British English is perceptually relevant based on intelligibility and dialect discrimination experiments The results reveal that speakers generally find the rhythm of their own variety more intelligible and that listeners can identify which variety a speaker is using on the basis of differences in speech rhythm   The Routledge Handbook of Corpora and English Language Teaching and Learning Reka R. from 1878 to 1960 the status of the English language spoken there has not yet been discussed systematically within the framework of World Englishes To determine whether English in Cyprus has second language variety status or should rather be considered as learner English the monograph investigates its historical sociopolitical and sociolinguistic background and drawing on a corpus of spoken data offers a synchronic analysis of linguistic features The results suggest to rethink some of the well established taxonomies of World Englishes research especially those that strictly differentiate between second language varieties and learner Englishes This renders the book relevant not only to scholars working in the field of World Englishes but also to second language acquisition researchers
