Compatible and Incompatible Relationships W. Ickes, 2012-12-06 Several years ago two of my colleagues and I had the opportunity to interview Fritz Heider perhaps the most influential theorist in the field of social psychology Harvey Ickes Kidd 1976 During our interview Heider affirmed a belief that had guided his career since the 1920s the belief that the study of human relationships is the most important task in which social scientists can engage Although many social scientists would profess to share this belief it is nonetheless true that the study of human relationships has been one of the most neglected tasks in the history of the social sciences including psychology What Heider found in the 1920s that most psychologists acknowledged the importance of studying human relationships but at the same time tended to focus their own research on more tractable topics such as memory and cognition is still very much evident in the 1980s Even within the more specific domain of social psychology a majority of researchers still choose to address those hybrid topics social cognition social categorization and stereotyping person memory etc that relate most directly to traditional areas of psychological research Still other researchers while choosing to study such important interpersonal phenomena as altruism aggression conflict and interpersonal attraction tend to focus so exclusively on these isolated and abstracted phenomena that they fail to provide a more inclusive view of the relationships in which these phenomena occur *Relationships, Well-Being and Behaviour* Harry Reis, 2018-05-15 In the World Library of Psychologists series international experts themselves present career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings and their major practical theoretical contributions In this fascinating volume Harry Reis reflects on a career that has earned him an international reputation as an eminent scholar and pioneer in the field of relationship science through a selection of papers that illustrate the foundational theme of his research career the importance of relationships for human well being The book charts the development of research in social psychology and relationship science through three key themes from the relationship context of human behaviour through to the value of studying behaviour in its natural context and finally intimacy and responsiveness in close relationships Also featuring a newly written introduction by the author contextualizing the selections and offering an intimate overview of his career this collection of key publications offers a unique and compelling insight into decades of groundbreaking work making it an essential resource for all those engaged or interested in the psychology of relationships and well being

Personality and Close Relationship Processes Stanley O. Gaines, Jr, 2016-08-18 Few observers of relationship dynamics would dispute the claim of interdependence theorists that a defining feature of close relationships is the extent to which partners influence each other's thoughts feelings or behaviors However partners do not behave simply in response to each other's behavior both partners in a given relationship bring themselves indeed their selves into the relationship as well Not only are individuals selves enormously complex and rich in content but so too are the multitude of personality characteristics including traits values attitudes motives and emotions that contribute to selves richness Gaines Jr provides a major integration of research on personality with research on relationship science and demonstrates how personality constructs can be readily incorporated into the two most influential theories of close relationships attachment theory and interdependence theory This study will be of value to scholars in the fields of close relationships personality psychology communication studies and family studies **Social Decentering** Mark Redmond, 2018-05-22 Social decentering theory was developed in response to the confusion created by the use of the term empathy and to a lesser extent perspective taking

Groups as Agents

Deborah Perron Tollefsen, 2015-06-03

In the social sciences and in everyday speech we often talk about groups as if they behaved in the same way as individuals thinking and acting as a singular being We say for example that Google intends to develop an automated car the U S Government believes that Syria has used chemical weapons on its people or that the NRA wants to protect the rights of gun owners We also often ascribe legal and moral responsibility to groups But could groups literally intend things Is there such a thing as a collective mind If so should groups be held morally responsible Such questions are of vital importance to our understanding of the social world In this lively engaging introduction Deborah Tollefsen offers a careful survey of contemporary philosophers answers to these questions and argues for the unorthodox view that certain groups should indeed be treated as agents and deserve to be held morally accountable Tollefsen explores the nature of belief action and intention and shows the reader how a belief in group agency can be reconciled with our understanding of individual agency and accountability Groups as Agents will be a vital resource for scholars as well as for students of philosophy and the social sciences encountering the topic for the first time
