Contemporary Debates In Philosophy Of Biology:

Contemporary Debates in Philosophy of Biology Francisco J. Ayala, Robert Arp, 2009-12-07 This collection of specially commissioned essays puts top scholars head to head to debate the central issues in the lively and fast growing field of philosophy of biology Brings together original essays on ten of the most hotly debated questions in philosophy of biology Lively head to head debate format sharply defines the issues and paves the way for further discussion Includes coverage of the new and vital area of evolutionary developmental biology as well as the concept of a unified species the role of genes in selection the differences between micro and macro evolution and much more Each section features an introduction to the topic as well as suggestions for further reading Offers an accessible overview of this fast growing and dynamic field whilst also capturing the imagination of professional philosophers and biologists Darwinian Creativity and Memetics Maria Kronfeldner, 2014-09-11 Maria Kronfeldner examines how Darwinism has been used to explain novelty and change in culture through the Darwinian approach to creativity and the theory of memes The first claims that creativity is based on a Darwinian process of blind variation and selection while the latter claims that culture is based on and explained by units memes that are similar to genes Both theories try to describe and explain mind and culture by applying Darwinism by way of analogies Kronfeldner shows that the analogies involved in these theories lead to claims that give either wrong or at least no new descriptions or explanations of the phenomena at issue Whereas the two approaches are usually defended or criticized on the basis that they are dangerous for our vision of ourselves this book takes a different perspective it questions the acuteness of these approaches Darwinian theory is not like a dangerous wolf hunting for our self image Far from it in the case of the two analogical applications addressed in this book Darwinian theory is shown to behave more like a disoriented sheep in wolf s clothing On Biopolitics Marco Piasentier, 2020-07-07 In *On Biopolitics* Marco Piasentier discusses one of the most persistent questions in biopolitical theory the divide between nature and language and attempts to redraw the conceptual map which has traditionally defined the permissible paths to address this question Taking his cue from Foucault s exhortation to think philologically and biologically Piasentier traverses the main theoretical and methodological frameworks which have informed the biopolitical debate on nature and language biology and politics Biopolitical theory becomes the center of gravity for an investigation encompassing diverse philosophical models from the Heideggerian linguistic turn to post Darwinian naturalism The divide between traditions is not proof of an impossible encounter but constitutes the site for a new conceptual topography Working in this interdisciplinary space Piasentier puts into question the command of language and the ends of nature two vestiges of a human all too human worldview that preclude the possibility of thinking philologically and biologically about biopolitics *On Biopolitics* An Inquiry into Nature and Language is essential reading for humanities and social sciences scholars with an interest in moving beyond debates about nature and language The Wiley Blackwell Companion to Religion and Ecology John Hart, 2017-03-24 In the face of the current environmental crisis which

clearly has moral and spiritual dimensions members of all the world's faiths have come to recognize the critical importance of religion's relationship to ecology The Wiley Blackwell Companion to Religion and Ecology offers a comprehensive overview of the history and the latest developments in religious engagement with environmental issues throughout the world Newly commissioned essays from noted scholars of diverse faiths and scientific traditions present the most cutting edge thinking on religion's relationship to the environment Initial readings explore the ways traditional concepts of nature in Christianity Judaism Islam Buddhism and other religious traditions have been shaped by the environmental crisis Readings then address the changing nature of theology and religious thought in response to the challenges of protecting the environment Various conceptual issues and themes that transcend individual traditions climate change bio ethics social justice ecofeminism and more are then analyzed before a final section examines some of the immediate challenges we face in caring for the Earth while looking to the future of religious environmentalism Timely and thought provoking Companion to Religion and Ecology offers illuminating insights into the role of religion in the ongoing struggle to secure the future well being of our natural world With a foreword by Ecumenical Patriarch Bartholomew I and an Afterword by John Cobb The Species Problem Igor

Ya. Pavlinov, 2023-02-24 The general notion of species is one of the most fundamental in biology But an idea of species is also one of the most persistent unresolved obsessions of biologists philosophers and theoreticians This new book investigates the multifaceted problem species as a conceptual envelope of that notion Contemporary conceptualists and evolutionary epistemology allow for a fresh look by analyzing the framework of history viewed as changes ordered by changing philosophical scientific contexts In this analysis the species problem is characterized in a pluralistic non trivial manner in contrast to a more monistic accepted view Key Features Provides new insights into the persistent species problem Focuses on conceptual history and identifies pivotal landmarks in the history of the concept of species Argues for a scientific consistency of species pluralism Discusses the evolving species hood in the context of new essentialism Related Titles Wilkins J S et al eds Species Problems and Beyond Contemporary Issues in Philosophy and Practice ISBN 978 1 0322 2147 2 Mishler B D What if anything are species ISBN 978 1 4987 1454 9 Wilkins J S Species The Evolution of the Idea Second Edition ISBN 978 1 1380 5574 2 Sigwart J D What Species Mean A User's Guide to the Units of Biodiversity ISBN 978 1 4987 9937 9

Articulating Intersex: A Crisis at the Intersection of Scientific Facts and Social Ideals Natalie Delimata, 2019-09-26 This book explores the ethical dilemma clinicians may face when disclosing a diagnosis of atypical sex The moment of disclosure reveals an epistemic incompatibility between scientific fact and social meaning in relation to sex Attempting to assess the bio psychosocial implications of this dilemma highlights a complex historic antagonism between fact and meaning making satisfactory resolution of this dilemma difficult Drawing on David Hume WVO Quine and Michel Foucault the author presents an integrative model which views scientific fact and social meaning as codetermining threads in one fabric of knowledge From this epistemic perspective the ethical dilemma is understood as a tear in the fabric signifying a rupturing of ontological

integrity To mend this tear and resolve the ethical dilemma three metaphysical perspectives are considered essentialism naturalism and emergentism The book's unique features include an exploration of the impact of diagnostic disclosure on people with atypical sex intersex a synthesis of the epistemic perspectives of social and natural science facilitating interdisciplinary collaboration a critical evaluation of three metaphysical perspectives on atypical sex intersex the application of Hume's epistemological and moral distinctions to contemporary biomedicine and bioethics The book's target audience includes academics students and professionals whose work intersects the natural and social sciences and individuals interested in the metaphysics epistemology and meta ethics of sex

Functions: From Organisms to Artefacts Jean Gayon, Armand de Ricqlès, Antoine C. Dussault, 2023-07-25 This book originally published in French examines the philosophical debates on functions over the last forty years and proposes new ways of analysis Pervasive throughout the life sciences the concept of function has the air of an epistemological scandal ascribing a function to a biological structure or process amounts to suggesting that it is explained by its effects This book confronts the debates on function with the use of the notion in a wide range of disciplines such as biology psychology and medicine It also raises the question of whether this notion which is as old in the history of technology as it is in the life sciences has the same meaning in these two domains

Lamarckism and the Emergence of 'Scientific' Social Sciences in Nineteenth-Century Britain and France Snaith B. Gissis, 2024-04-09 The book presents an original synthesizing framework on the relations between the biological and the social Within these relations the late nineteenth century emergence of social sciences aspiring to be constituted as autonomous as scientific disciplines is described analyzed and explained Through this framework the author points to conceptual and constructive commonalities conjoining significant founding figures Lamarck Spencer Huxlings Jackson Ribot Durkheim Freud who were not grouped nor analyzed in this manner before Thus the book offers a rather unique synthesis of the interactions of the social the mental and the evolutionary biological Spencerian Lamarckism and or Neo Lamarckism crystallizing into novel fields It adds substantially to the understanding of the complexities of evolutionary debates during the last quarter of the nineteenth century It will attract the attention of a wide spectrum of

specialists academics and postgraduates in European history of the nineteenth century history and philosophy of science and history of biology and of the social sciences including psychology Computational Phenotypes Sergio Balari,Guillermo Lorenzo González,2013 This book written accessibly for both biologists and linguists argues that language is not as exceptional a human trait as some linguists believe it to be It is rather according to the authors just the human version of a fairly common and conservative organic system the Central Computational Complex **Challenging the Modern Synthesis** Philippe Huneman,Denis M. Walsh,2017-08-17 Since its origin in the early 20th century the Modern Synthesis theory of evolution has grown to become the orthodox view on the process of organic evolution Its central defining feature is the prominence it accords to genes in the explanation of evolutionary dynamics Since the advent of the 21st century however the Modern Synthesis has been subject to repeated and sustained challenges These are largely empirically driven In the last two decades evolutionary biology has witnessed unprecedented growth in the understanding of those processes that underwrite the development of organisms and the inheritance of characters The empirical advances usher in challenges to the conceptual foundations of evolutionary theory The extent to which the new biology challenges the Modern Synthesis has been the subject of lively debate Many current commentators charge that the new biology of the 21st century calls for a revision extension or wholesale rejection of the Modern Synthesis Theory of evolution Defenders of the Modern Synthesis maintain that the theory can accommodate the exciting new advances in biology The original essays collected in this volume survey the various challenges to the Modern Synthesis arising from the new biology of the 21st century The authors are evolutionary biologists philosophers of science and historians of biology from Europe and North America Each of the essays discusses a particular challenge to the Modern Synthesis treatment of inheritance development or adaptation Taken together the essays cover a spectrum of views from those that contend that the Modern Synthesis can rise to the challenges of the new biology with little or no revision required to those that call for the abandonment of the Modern Synthesis The collection will be of interest to researchers and students in evolutionary biology and the philosophy and history of the biological sciences Understanding Evolution Kostas Kampourakis,2014-04-03 Bringing together conceptual obstacles and core concepts of evolutionary theory this book presents evolution as straightforward and intuitive **Contemporary Debates in Bioethics** Arthur L. Cordovil, Gil Santos, Davide Vecchi, 2023-12-12 This open access book addresses the epistemological and ontological significance as well as the scope of new mechanism In particular this book addresses the issues of what is new about new mechanism the epistemological and ontological reasons underlying the adoption of mechanistic instead of other modelling strategies as well as the possibility of mechanistic explanation to accommodate a non trivial notion of emergence Arguably new mechanism has been particularly successful in making sense of scientific practice in the molecular life sciences But what about other sciences This book enlarges the context of analysis addressing the issue of the putative compatibility between the current ways of conceiving new mechanism and actual scientific practices in quantum physics chemistry biochemistry developmental biology and the cognitive sciences

What It Means to Be Moral Phil Zuckerman, 2020-09-15 A thoughtful perspective on humans capacity for moral behavior Kirkus Reviews A comprehensive introduction to religious skepticism Publishers Weekly In What It Means to Be Moral Why Religion Is Not Necessary for Living an Ethical Life Phil Zuckerman argues that morality does not come from God Rather it comes from us our brains our evolutionary past our ongoing cultural development our social experiences and our ability to reason reflect and be sensitive to the suffering of others By deconstructing religious arguments for God based morality and guiding readers through the premises and promises of secular morality Zuckerman argues that the major challenges facing the world today from global warming and growing inequality to religious support for unethical political policies to gun violence and terrorism are best approached from a nonreligious ethical framework In short we need to look to our fellow humans and within ourselves for moral progress and ethical action In this brilliant provocative and timely book Phil Zuckerman breaks down the myth that our morality comes from religion compellingly making the case that when it comes to the biggest challenges we face today a secular approach is the only truly moral one Ali A Rizvi author of The Atheist Muslim

Reductive Explanation in the Biological Sciences Marie I. Kaiser, 2015-12-16 This book develops a philosophical account that reveals the major characteristics that make an explanation in the life sciences reductive and distinguish them from non reductive explanations Understanding what reductive explanations are enables one to assess the conditions under which reductive explanations are adequate and thus enhances debates about explanatory reductionism The

account of reductive explanation presented in this book has three major characteristics First it emerges from a critical reconstruction of the explanatory practice of the life sciences itself Second the account is monistic since it specifies one set of criteria that apply to explanations in the life sciences in general Finally the account is ontic in that it traces the reductivity of an explanation back to certain relations that exist between objects in the world such as part whole relations and level relations rather than to the logical relations between sentences Beginning with a disclosure of the meta philosophical assumptions that underlie the author s analysis of reductive explanation the book leads into the debate about reductionism in the philosophy of biology and continues with a discussion on the two perspectives on explanatory reduction that have been proposed in the philosophy of biology so far The author scrutinizes how the issue of reduction becomes entangled with explanation and analyzes two concepts the concept of a biological part and the concept of a level of organization The results of these five chapters constitute the ground on which the author bases her final chapter developing her ontic account of reductive explanation

Causal Pluralism in the Life Sciences Kolja Ehrenstein, 2022-03-28 This book takes a new approach to the debate on causal pluralism in the philosophy of biology by asking how useful pluralism is instead of debating its truth The core thesis in this work is that many problems do not hinge on the question of whether or not we subscribe to causal pluralism As one step in this central argument the author develops an account that reasonably distinguishes pluralism from monism in another step he studies cases that allegedly motivate causal pluralism in biology Examining these cases shows how pluralism is often irrelevant and why pursuing pluralism is sometimes dangerous since it may generate pseudo solutions to persistent philosophical problems This book offers a systematic approach to this subject matter and argues that we might have overestimated the significance of the monism pluralism distinction and at the same time failed to see the risks of pursuing causal pluralism

Neo-Aristotelian Perspectives on Formal Causation Ludger Jansen, Petter Sandstad, 2021-03-22 This is the first volume of essays devoted to Aristotelian formal causation and its relevance for contemporary metaphysics and philosophy of science The essays trace the historical development of formal causation and demonstrate its relevance for contemporary issues such as causation explanation laws of nature functions essence modality and metaphysical grounding The introduction to the volume covers the history of theories of formal causation and points out why we need a theory of formal causation in contemporary philosophy Part I is concerned with scholastic approaches to formal causation while Part II presents four contemporary approaches to formal causation The three chapters in Part III explore various notions of dependence and their relevance to formal causation Part IV finally discusses formal causation in biology and cognitive sciences *Neo Aristotelian Perspectives on Formal Causation* will be of interest to advanced graduate students and researchers working on contemporary Aristotelian approaches to metaphysics and philosophy of science This volume includes contributions by Jos Tom s Alvarado Christopher J Austin Giacomo Giannini Jani Hakkarainen Ludger Jansen Markku Kein nen Gyula Klima James G Lennox Stephen Mumford David S Oderberg Michele Paolini Paoletti Sandeep Prasada Petter
