Closing the Gap

Between ASIC & Custom David Chinnery, Kurt Keutzer, 2007-05-08 by Kurt Keutzer Those looking for a quick overview of the book should fast forward to the Introduction in Chapter 1 What follows is a personal account of the creation of this book The challenge from Earl Killian formerly an architect of the MIPS processors and at that time Chief Architect at Tensilica was to explain the significant performance gap between ASICs and custom circuits designed in the same process generation The relevance of the challenge was amplified shortly thereafter by Andy Bechtolsheim founder of Sun Microsystems and ubiquitous investor in the EDA industry At a dinner talk at the 1999 International Symposium on Physical Design Andy stated that the greatest near term opportunity in CAD was to develop tools to bring the performance of ASIC circuits closer to that of custom designs There seemed to be some synchronicity that two individuals so different in concern and character would be pre occupied with the same problem Intrigued by Earl and Andy s comments the game was afoot Earl Killian and other veterans of microprocessor design were helpful with clues as to the sources of the performance discrepancy layout circuit design clocking methodology and dynamic logic I soon realized that I needed help in tracking down clues Only at a wonderful institution like the University of California at Berkeley could I so easily commandeer an ab bodied graduate student like David Chinnery with a knowledge of architecture circuits computer aided design and algorithms

Contemporary Logic Design Randy H. Katz, 1994 This text demonstrates state of the art technologies for the design of modern logic circuits including CAD tools rapid prototyping and programmable logic devices It provides practice in traditional techniques of logic

Katz,Gaetano Borriello,2006 The Best of ICCAD Andreas Kuehlmann,2012-12-06 In 2002 the International Conference on Computer Aided Design ICCAD celebrates its 20th anniversary This book commemorates contributions made by ICCAD to the broad field of design automation during that time The foundation of ICCAD in 1982 coincided with the growth of Large Scale Integration The sharply increased functionality of board level circuits led to a major demand for more powerful Electronic Design Automation EDA tools At the same time LSI grew quickly and advanced circuit integration became widely available This in turn required new tools using sophisticated modeling analysis and optimization algorithms in order to manage the evermore complex design processes Not surprisingly during the same period a number of start up companies began to commercialize EDA solutions complementing various existing in house efforts The overall increased interest in Design Automation DA required a new forum for the emerging community of EDA professionals one which would be focused on the publication of high quality research results and provide

a structure for the exchange of ideas on a broad scale Many of the original ICCAD volunteers were also members of CANDE Computer Aided Network Design a workshop of the IEEE Circuits and System Society In fact it was at a CANDE workshop that Bill McCalla suggested the creation of a conference for the EDA professional Bill later developed the name

Plithogenic Logic for Determination of Strategic Solutions for Ergonomic Occupational Health Risks Gustavo Eduardo Fernández Villacrés, Fausto Alberto Viscaino Naranjo, Roberto Rolando López López, 2021-05-01 This research aims to evaluate the knowledge about the incidence of ergonomic risks in the occupational health of the teachers of the UNIANDÉS University Our starting point was the problem related to many physical affectations suffered by teachers and registered in the Institution's medical department system Then they were scientifically based on topics such as occupational health occupational risks ergonomics and technological elements Methodologically we worked with a population of 478 teachers from which a sample of 218 people was selected Digital survey through the Forms application and the AHP Saaty method were the investigative techniques we used Among the main findings it can be noted that the vast majority of those investigated spend an average of 10 hours in front of the computer and are unaware of aspects related to ergonomics and its impact on occupational health Finally we make a proposal related to the use of technological elements to generate knowledge about the occupational risks generated by ergonomic aspects The American School ,1919 **Post-Silicon and Runtime Verification for Modern Processors** Ilya Wagner, Valeria Bertacco, 2010-11-25 The purpose of this book is to survey the state of the art and evolving directions in post silicon and runtime verification The authors start by giving an overview of the state of the art in verification particularly current post silicon methodologies in use in the industry both for the domain of processor pipeline design and for memory subsystems They then dive into the presentation of several new post silicon verification solutions aimed at boosting the verification coverage of modern processors dedicating several chapters to this topic The presentation of runtime verification solutions follows a similar approach This is an area of processor design that is still in its early stages of exploration and that holds the promise of accomplishing the ultimate goal of achieving complete correctness guarantees for microprocessor based computation The authors conclude the book with a look towards the future of late stage verification and its growing role in the processor life cycle *Technical Abstract Bulletin* ,1979
