Contrast Agents In Liver Imaging Series In Radiology:

Contrast Agents in Liver Imaging Th. Balzer, B. Hamm, H.P. Niendorf, 2012-12-06 Recent advances in surgical procedures for the management of focal liver diseases have greatly increased the demand for diagnostic accuracy. So far these demands have been only partially met by further technical developments such as colour coded duplex sonography, spiral CT and marked improvements in magnetic resonance imaging. It is becoming increasingly clear that liver specific contrast media are essential for utilizing these technical developments to their fullest advantage in patient care. Against this background a workshop was held to explore the current methods of diagnostic imaging of the liver and to try and establish a profile for the future liver specific contrast media. The pathologist's introductory and general overview is followed by chapters on the individual imaging procedures such as ultrasound, CT and MRI so that each of the three is given the attention it deserves. The book will be of interest to radiologists from the various disciplines and also those who plan and perform therapies particularly surgeons and internists. *Cumulated Index Medicus*, 1989 [Contrast Media in Ultrasonography](#)

Henrik S. Thomsen, Robert N. Muller, Robert F. Mattrey, 2012-12-06 The use of contrast media within diagnostic radiology has been firmly established for many years now. Radiologic contrast media render immense services in daily clinical practice to innumerable patients all over the world. When the new cross sectional modalities such as computed tomography and magnetic resonance imaging were introduced into clinical practice it rapidly became evident that the judicious use of contrast media allows the optimal exploitation of the great diagnostic potential of these revolutionary methods. More recently efforts to create specific contrast media for ultrasound imaging have been successful and the first beneficial results of their application in daily practice are now evident. The aim of this book is to bring together the results of the tremendous research that has been performed during recent years.

in order to develop specific contrast media for magnetic resonance imaging and ultrasonography and also to develop safer contrast media for the classical radiologic techniques as well as computed tomography Moreover the book provides a comprehensive overview of the indications for and applications of these new contrast media in clinical radiology Finally risks side effects and complications which may occur with the use of these drugs are covered appropriately The three editors are leading and well known experts in their specific field They have been very successful in ensuring the collaboration of so many internationally known specialists to cover the different topics dealt with in this book *Contrast Media* Henrik S.
