R. Pandi-Perumal, Jaime M. Monti, 2020-12-17 This volume highlights the recent advances in the understanding of the endocannabinoid system and the likely benefit from the therapeutic effects of cannabinoid treatment in a variety of health issues Archeological evidence has shown that Cannabis has a long history of use for multiple purposes including the treatment of medical conditions The primary active constituent of the hemp plant Cannabis sativa delta 9 tetrahydrocannabinol 9 THC causes euphoria enhancement of sensory perception tachycardia antinociception difficulties in concentration and impairment of memory among other effects Despite these undesirable effects signaling is mostly inhibitory and suggests a putative role for cannabinoids as therapeutic agents by managing several diseases where inhibition of neurotransmitter release would be beneficial The themes of this book have been edited and written by world leaders in the field The contents of the volume aims at readers from a range of academic and professional disciplines such as biomedicine several areas of biology neurology clinical medicine and pharmacy *Cannabis* Ernest Small, 2016-10-14 Cannabis sativa is best known as the source of marijuana the world s most widely consumed illicit recreational drug However the plant is also extremely useful as a source of stem fiber edible seed oil and medicinal compounds all of which are undergoing extremely promising research technological applications and business investment Indeed despite its capacity for harm as a recreational drug cannabis has phenomenal potential for providing new products to benefit society and for generating extensive employment and huge profits Misguided policies until recently have prevented legitimate research on the beneficial properties of cannabis but there is now an explosion of societal scientific and political support to reappraise and remove some of the barriers to usage Unfortunately there is also a corresponding dearth of objective analysis Towards redressing the limitation of information Cannabis A Complete Guide is a comprehensive reference

summarizing botanical business chemical ecological genetic historical horticultural legal and medical considerations that are critical for the wise advancement and management of cannabis in its various forms This book documents both the risks and benefits of what is indisputably one of the world s most important species The conflicting claims for medicinal virtues and toxicological vices are examined based mainly on the most recent authoritative scientific reviews The attempt is made consistently to reflect majority scientific opinion although many aspects of cannabis are controversial Aside from the relevance to specialists the general public should find the presentation attractive because of the huge interest today in marijuana Unfortunately society has become so specialized and compartmentalized that most people have limited appreciation of the importance of science to their lives except when a topic like marijuana becomes sensationalized This review of cannabis can serve as a vehicle for public education in the realm of science and technology Indeed towards the goal of disseminating the important information in this book to a wide audience the presentation is user friendly concise and well illustrated in the hope that non specialists will find the topics both informative and entertaining

The African Roots of Marijuana Chris S.

Duvall,2019-05-09 After arriving from South Asia approximately a thousand years ago cannabis quickly spread throughout the African continent European accounts of cannabis in Africa often fictionalized and reliant upon racial stereotypes shaped widespread myths about the plant and were used to depict the continent as a cultural backwater and Africans as predisposed to drug use These myths continue to influence contemporary thinking about cannabis In The African Roots of Marijuana Chris S Duvall corrects common misconceptions while providing an authoritative history of cannabis as it flowed into throughout and out of Africa Duvall shows how preexisting smoking cultures in Africa transformed the plant into a fast acting and easily dosed drug and how it later became linked with global capitalism and the slave trade People often used cannabis to cope with oppressive working conditions under colonialism as a recreational drug and in religious and political movements This expansive look at Africa s importance to the development of human knowledge about marijuana will challenge everything readers thought they knew about one of the world s most ubiquitous plants

Neurochemical Systems and Signaling Ghulam Md Ashraf,2023-06-30

The human brain is made up of billions of neurons that communicate with each other through chemical messengers which are referred to as neuroactive substances These neuroactive substances include neurotransmitters neuromodulators and neurohormones Some neurotransmitters also act as neuromodulators and neurohormones It is unlikely that there would ever be a consensus about the meanings of these neuroactive substances including neurotransmitters since the term neurotransmitter has traditionally been used very loosely indeed to include neurotransmitters neurohormones and neuromodulators Any alterations in the functioning of these neuroactive substances can cause diseases The brain is the ultimate center that regulates all neurological and behavioral aspects of the body through neuronal communications mediated via various neurochemicals Thus neurological and psychiatric disorders are in most cases the result of disturbed neurochemical balance Besides the multifaceted involvement of billions of neuronal cells the central nervous system is a complex organization with a diverse number of neurotransmitter systems as compared to the autonomic

nervous system in which the parasympathetic system works on the rest and digest phenomenon and the sympathetic system works on the fight or flight phenomenon There are more than 20 neurotransmitter systems and multiple receptors for each neurotransmitter Any alterations in neurochemical balance are expressed in the form of neurological or psychiatric disorders such as epilepsy Parkinson s disease Alzheimer s disease psychosis depression etc Acetylcholine noradrenaline dopamine and 5 HT are of the utmost importance among neurotransmitters for their profound role in the pathogenesis of various neurological and psychiatric disorders in humans Yet the involvement of various proteins and peptides such as neurotrophic factors growth factors and endogenous chemical compounds cannot be ignored Day by day the suffering of people due to an imbalance of neurotransmitters is increasing Various factors for example stress diet genetics and toxins such as alcohol and nicotine contribute to this imbalance This imbalance may lead to mental health complaints The main purpose of this book is to give a comprehensive overview of the neurological diseases associated with neurochemical imbalances This book will help readers gain a comprehensive understanding of neuronal signaling and related neurological disorders as well as status and future opportunities and challenges It will provide a brief account of neurotransmission as either a study or high yield revision aid
