Climate Change And Political Strategy:

Climate Change and Political Strategy Hugh Compston, 2013-09-13 Although the science of climate change is well established and there are well known policy instruments that could significantly reduce greenhouse gas GHG emissions without prohibitive economic costs political obstacles to more determined action remain despite heightened concern among mainstream politicians and the public This book analyses the political dynamics of climate policy in affluent democracies from a number of different theoretical angles in order to improve our understanding of which political strategies would be likely to enable national governments to make deep cuts in GHG emissions while avoiding significant political damage The authors argue that different conceptual and logical theories highlight different features of political situations Describing the politics of climate policy in this way will result in different conceptual logical views of this phenomenon And to some extent the inferences drawn from such differing views about the nature of political obstacles to more vigorous action on climate change and the best ways of overcoming them will also be different Singly and together these analyses reveal a more detailed nuanced view of the political options open to activist governments This book was previously published as a special issue of Environmental Politics

Legal and Political Challenges of Governing the Environment and Climate Change Gary Wickham, Jo-Ann Goodie, 2013-11-26 The environment has not always been protected by law It was not until the middle of the 20th century that the environment came to be understood as an entity in need of special care and the law politics duo firmly fixed its focus on this issue In this book Wickham and Goodie tell the story of how law and politics first came upon the environment as an object in need of special attention They outline the unlikely intersection of aesthetics and science that made the environment into the matter of great concern it is today The book describes the way private common law strategies and public law legislative strategies have approached the task of protecting the environment and explore the greatest environmental challenge to have so far confronted environmental law and politics the threat of global climate change The book offers descriptions of many of the strategies being deployed to meet this challenge and present some troubling assessments of them The book will be of great interest to students teachers and researchers of environmental law socio legal studies environmental studies and political theory

Climate Clever Hugh Compston, Ian Bailey, 2013-03-01 Why despite two decades of climate policy have affluent democracies made so little progress in cutting greenhouse gas emissions We know that there are ways of doing this that are both practical and affordable It is politics that is the problem Stringent climate policies may lead companies to redirect investment elsewhere or lead voters to retaliate at the ballot box There are many political obstacles to stronger action What can be done Based on an analysis of the logic of policy making plus observation of recent developments in climate politics this book identifies a broad range of political strategies that are available to governments that wish to take more effective action against climate change while avoiding serious political damage Separate chapters deal with strategies relating to unilateral action persuasion political exchange and changing the

terms of political exchange This is the first book length study of political strategy and climate change and will be of interest not only to policymakers but also to experts and activists looking to formulate politically realistic policy proposals and scholars and students of politics and environmental studies Hegemony, Discourse, and Political Strategy Thomas Jacobs,2022-10-15 Hegemony Discourse and Political Strategy revisits a question that has long fascinated socialists progressives democrats Greens and Marxists how do left wing forces win at politics Thirty five years ago Ernesto Laclau and Chantal Mouffe tackled this puzzle in ground breaking fashion by drawing on a signature blend of linguistics Marxist theory and poststructuralism that came to be known as post Marxist Discourse Theory PDT This book takes up the legacy of Laclau and Mouffe and elaborates PDT into a full fledged theory of political strategy for the first time It argues that post Marxism provides the foundations for a form of discourse analysis that can explain how political strategies play out as well as why they fail or succeed Its empirical potential to illuminate the dynamics of hegemonic struggles is demonstrated through a case study focusing on the contestation and politicization of EU trade policy in the European Parliament Kick-Starting Government Action against Climate Change Ian Budge,2021-11-11 With drastic action needing to be taken now rather than over the 30 years to 2050 this book addresses the crucial question of how to get action from governments who will always put short term considerations e g post Covid economic growth over longer term climate priorities unless forced to do otherwise How might governments be persuaded to implement policies that will result in effective action And how can this be achieved at an international as well as national level These are the questions that this book focuses on Taking a systematic political science point of view and drawing on collective choice and other theories of political action this book analyses the key political and economic dynamics shaping climate policies around the world identifying major political opportunities that can be exploited by well informed and determined political actors such as NGOs and social movements This book describes how to advance and accelerate climate action around the world and will be of interest internationally to climate change campaigners activists political and environmental scientists *Multinationals' Political Strategies on Climate Change* Ans Kolk,Jonatan Pinkse,2007 This paper explores the international dimensions of multinationals corporate political activities focusing on an international issue climate change that is being implemented differently in a range of countries Analyzing data from FT Global 500 firms it examines the influence on types and process of multinationals political strategies reckoning with institutional contexts and issue saliency Findings show that the type of political activities can be characterized as an information strategy to influence policymakers towards market based solutions not so much withholding action on emission reduction Moreover multinationals pursue self regulation targeting a broad range of political actors The process of political strategy is mostly one of collective action International differences particularly surface in the type of political actors aimed at with US and Australian firms focusing more on non government actors voluntary programs than European and Japanese firms Influencing home country not host country governments is the main component of international political strategy on

climate change *Climate Change and the Crisis of Capitalism* Mark Pelling, David Manuel-Navarrete, Michael Redclift, 2012-08-21 Are established economic social and political practices capable of dealing with the combined crises of climate change and the global economic system Will falling back on the wisdoms that contributed to the crisis help us to find ways forward or simply reconfigure risk in another guise This volume argues that the combination of global environmental change and global economic restructuring require a re thinking of the priorities processes and underlying values that shape contemporary development aspirations and policy This volume brings together leading scholars to address these questions from several disciplinary perspectives environmental sociology human geography international development systems thinking political sciences philosophy economics and policy management science The book is divided into four sections that examine contemporary development discourses and practices It bridges geographical and disciplinary divides and includes chapters on innovative governance that confront unsustainable economic and environmental relations in both developing and developed contexts It emphasises the ways in which dominant development paths have necessarily forced a separation of individuals from nature but also from society and even from self These three levels of alienation each form a thread that runs through the book There are different levels and opportunities for a transition towards resilience raising questions surrounding identity governance and ecological management This places resilience at the heart of the contemporary crisis of capitalism and speaks to the relationship between the increasingly global forms of economic development and the difficulties in framing solutions to the environmental problems that carbon based development brings in its wake Existing social science can help in not only identifying the challenges but also potential pathways for making change locally and in wider political economic and cultural systems but it must do so by identifying transitions out of carbon dependency and the kind of political challenges they imply for reflexive individuals and alternative community approaches to human security and wellbeing *Climate Change and the Crisis of Capitalism* contains contributions from leading scholars to produce a rich and cohesive set of arguments from a range of theoretical and empirical viewpoints It analyses the problem of resilience under existing circumstances but also goes beyond this to seek ways in which resilience can provide a better pathway and template for a more sustainable future This volume will be of interest to both undergraduate and postgraduate students studying Human Geography Environmental Policy and Politics **Climate Change and International Politics** Narottam Gaan, 2008 Accustomed to understanding security primarily a matter spatial exercise in distancing and boundary making on the part of states and their military alliances to secure borders and institutions from outside threats the nations of the world have so far given a short shrift to the gravity of environmental degradation as a factor or catalyst of intrastate or interstate conflict or at worst a security threat to entire humanity until the shafts of retaliatory responses of the infuriated climate change to the cloddish and brutish power of the rich industrialized nations to destroy it by its emission of carbon dioxide and other greenhouse gases pointed toward man menacing with funereal and cascading consequences of global warming Thus climate

change which has so far been on the fringe of human concern or in American President's view a myth or a hoax has catapulted into the center stage of great political flare up among the nations of the world on the issue of apportioning the responsibility on rich industrialized nations or the populous South to mitigate the dangers of climate change which seems to be mired in the contradiction between North's advocacy of inequity in having uncontested access to the atmosphere as carbon sinks and equity while disabusing the atmosphere of the carbon debris Not walking on trodden furrows this book expatiates on the desideratum of a paradigm shift from faith in the Newtonian mechanistic view of the universe to a faith in the profundity of Eastern wisdom and new insights presently found in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry

An Urban Politics of Climate Change Harriet

Bulkeley, Vanesa Broto, Gareth Edwards, 2014-10-17 The confluence of global climate change growing levels of energy consumption and rapid urbanization has led the international policy community to regard urban responses to climate change as an urgent agenda World Bank 2010 The contribution of cities to rising levels of greenhouse gas emissions coupled with concerns about the vulnerability of urban places and communities to the impacts of climate change have led to a relatively recent and rapidly proliferating interest amongst both academic and policy communities in how cities might be able to respond to mitigation and adaptation Attention has focused on the potential for municipal authorities to develop policy and plans that can address these twin issues and the challenges of capacity resource and politics that have been encountered While this literature has captured some of the essential means through which the urban response to climate change is being forged is that it has failed to take account of the multiple sites and spaces of climate change response that are emerging in cities off plan An Urban Politics of Climate Change provides the first account of urban responses to climate change that moves beyond the boundary of municipal institutions to critically examine the governing of climate change in the city as a matter of both public and private authority and to engage with the ways in which this is bound up with the politics and practices of urban infrastructure The book draws on cases from multiple cities in both developed and emerging economies to providing new insight into the potential and limitations of urban responses to climate change as well as new conceptual direction for our understanding of the politics of environmental governance

Negotiating Climate Change in Crisis

Steffen Böhm, Sian Sullivan, 2021-09-28 Climate change negotiations have failed the world Despite more than thirty years of high level global talks on climate change we are still seeing carbon emissions rise dramatically This edited volume comprising leading and emerging scholars and climate activists from around the world takes a critical look at what has gone wrong and what is to be done to create more decisive action Composed of twenty eight essays a combination of new and republished texts the anthology is organised around seven main themes paradigms what counts extraction dispatches from a climate change frontline country governance finance and action's Through this multifaceted approach the contributors ask pressing questions about how we conceptualise and respond to the climate crisis providing both big picture perspectives and

The Politics of Carbon Markets Benjamin Stephan,Richard Lane,2014-08-27 The carbon markets are in the middle of a fundamental crisis a crisis marked by collapsing prices fleeing actors and ever increasing greenhouse gas levels Yet carbon trading remains at the heart of global attempts to respond to climate change Not only this but markets continue to proliferate particularly in the Global South The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets First the markets must be understood in relation to the politics involved in their development maintenance and opposition Second this politics is multiform and pervasive Implementation of new techniques and measuring tools policy development and contestation and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts This wide ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets climate change governance and environmental politics Climate Change Governance Jörg Knieling,Walter Leal

Filho,2012-07-30 Climate change is a cause for concern both globally and locally In order for it to be tackled holistically its governance is an important topic needing scientific and practical consideration Climate change governance is an emerging area and one which is closely related to state and public administrative systems and the behaviour of private actors including the business sector as well as the civil society and non governmental organisations Questions of climate change governance deal both with mitigation and adaptation whilst at the same time trying to devise effective ways of managing the consequences of these measures across the different sectors Many books have been produced on general matters related to climate change such as climate modelling temperature variations sea level rise but to date very few publications have addressed the political economic and social elements of climate change and their links with governance This book will address this gap Furthermore a particular feature of this book is that it not only presents different perspectives on climate change governance but it also introduces theoretical approaches and brings these together with practical examples which show how main principles may be implemented in practice **Business Strategies for Sustainability** Helen

Borland,Adam Lindgreen,Francois Maon,Véronique Ambrosini,Beatriz Palacios Florencio,Joelle Vanhamme,2018-10-03 Business Strategies for Sustainability brings together important research contributions that demonstrate different approaches to business strategies for sustainability Many corporate initiatives toward what firms perceive to be sustainability are simply efficiency drives or competitive moves falling far short of actual strategies for ecological sustainability To suggest true ecological sustainability strategies this new research anthology adopts an interdisciplinary or transdisciplinary approach to discern what business strategies might look like if they were underpinned by environmental and ecological science The 23

chapters in this anthology reflect five main topic sections a delineating sustainability challenges and visions b contradiction integration and transformation of business and sustainability logics c innovating and developing strategic capabilities for sustainability d assessing and valuing sustainability and e toward multi level engagement and collaboration

Climate Change as a Security Risk Hans Joachim Schellnhuber, 2010-09-23 Without resolute counteraction climate change will overstretch many societies adaptive capacities within the coming decades This could result in destabilization and violence jeopardizing national and international security to a new degree However climate change could also unite the international community This is provided that we recognize climate change as a threat to humankind and so set the course for adopting a dynamic and globally coordinated climate policy If we fail to do so climate change will draw ever deeper lines of division and conflict in international relations triggering numerous conflicts between and within countries over the distribution of resources especially water and land and over the management of migration or over compensation payments between the countries mainly responsible for climate change and those countries most affected by its destructive effects With Climate Change as a Security Risk WBGU has compiled a flagship report on an issue that quite rightly is rising rapidly up the international political agenda The authors pull no punches on the likelihood of increasing tensions and conflicts in a climatically constrained world and spotlight places where possible conflicts may flare up in the 21st century unless climate change is checked The report makes it clear that climate policy is preventative security policy
