Climate Finance Richard B. Stewart, Benedict Kingsbury, Bryce Rudyk, 2009-11-01 Preventing risks of severe damage from climate change not only requires deep cuts in developed country greenhouse gas emissions but enormous amounts of public and private investment to limit emissions while promoting green growth in developing countries While attention has focused on emissions limitations commitments and architectures the crucial issue of what must be done to mobilize and govern the necessary financial resources has received too little consideration In *Climate Finance* a leading group of policy experts and scholars shows how effective mitigation of climate change will depend on a complex mix of public funds private investment through carbon markets and structured incentives that leave room for developing country innovations This requires sophisticated national and global regulation of cap and trade and offset markets forest and energy policy international development funding international trade law and coordinated tax policy Thirty six targeted policy essays present a succinct overview of the emerging field of climate finance defining the issues setting the stakes and making new and comprehensive proposals for financial regulatory and governance mechanisms that will enrich political and policy debate for many years to come The complex challenges of climate finance will continue to demand fresh insights and creative approaches The ideas in this volume mark out starting points for essential institutional and policy innovations

The Political Economy of Climate Finance Effectiveness in Developing Countries Mark Purdon, 2024 In *The Political Economy of Climate Finance Effectiveness in Developing Countries* Mark Purdon contributes to broader debates on the international climate cooperation by evaluating how three different climate finance instruments have been undertaken in three countries Tanzania Uganda and Moldova and evaluates their effectiveness in actually reducing emissions He shows that the effectiveness of climate finance tools depends on the interaction between a nation s development policy paradigms and its interests in other sectors of their economies Purdon s findings further inform the design of international and transnational efforts to engage developing countries on climate change mitigation by emphasizing the importance of domestic politics and the state

Air Pollution, Clean Energy and Climate Change Anilla Cherian, 2022-04-04 *AIR POLLUTION CLEAN ENERGY AND CLIMATE CHANGE* Anthropogenic climate change is a globally recognized threat multiplier Yet decades of intergovernmental negotiations have failed to curb toxic levels of fossil fuel energy related air pollution which the World Health Organization WHO has identified as the world s largest single environmental health risk Lying in plain view are the troubling truths about the morbidity and ill health burdens associated with anthropogenic climate change that are borne by those who have done the least to contribute to per capita emissions of greenhouse gas emissions Ignoring the nexus between air pollution lack of access to clean energy and climate adversities represents a collective failure of the UN s ambitious universally agreed upon 2030 Sustainable Development Agenda SDA which pledged to leave no one behind This book highlights the air pollution crisis that emanates from the heavy reliance on polluting forms of energy and the urbanization of poverty in developing countries It provides a framework for understanding why the broader sustainable development community needs to address the more neglected intersection between adverse climatic impacts and energy related air pollution which devastates the lives of the poorest and most vulnerable amongst us especially young children women and the elderly It focuses on the importance of breaking down persistent global silos and goals on sustainable energy for all and climate change reflected in the UNs 2030 SDA and the 2015 Paris Agreement Integrating clean air and climate mitigation measures that specifically include curbing short lived climate pollutants such as

black carbon via innovative partnerships modalities are seen as vital to clean energy and climate responsive action This book argues that linked actions by non nation state actors aimed at reducing air pollution and ameliorating short term climate pollutants in the most populous cities particularly in countries like India where annual average particulate matter pollution levels consistently exceed WHO guidelines are essential in reducing grave health costs and disease burdens Air Pollution Clean Energy and Climate Change will be of particular interest to policy makers researchers environmental advocates civil society stakeholders and practitioners who want to understand the urgency of addressing linkages between climate change fossil fuel energy air pollution and public health risks The cover image is an oil painting by Anilla Cherian which incorporates tree bark and twigs and serves as a reminder of the daily energy sources used by millions who lack access to clean energy and are exposed to high levels of household air pollution It is the second part of a series with the first one serving as the cover image to Energy and Global Climate Change Cherian 2015 Photograph of painting by Alison Sheehy Photography
