Climate Responsive Architecture By Arvind Krishan:

Climate Responsive Architecture Arvind Krishan, 2001 The architect community is not far behind in this endeavour Climate Responsive Architecture has become a prime issue for architects Since most of the literature in this area is physics oriented it is somewhat difficult for architects to apply these principles to practice The book has been written with a view to make data such as climatic zones temperature zones and other climatic parameters more comprehensible The book is the outcome of a long drawn research in the area of CRA and boasts of international names such as Dr Nick Baker Prof Szokolay Prof Simos Yannas and Dr Jeffrey Cook among others

Air-Conditioning in Modern American Architecture, 1890-1970 Joseph M. Siry, 2021-02-01 Air Conditioning in Modern American Architecture 1890 1970 documents how architects made environmental technologies into resources that helped shape their spatial and formal aesthetic In doing so it sheds important new light on the ways in which mechanical engineering has been assimilated into the culture of architecture as one facet of its broader modernist project Tracing the development and architectural integration of air conditioning from its origins in the late nineteenth century to the advent of the environmental movement in the early 1970s Joseph M Siry shows how the incorporation of mechanical systems into modernism s discourse of functionality profoundly shaped the work of some of the movement s leading architects such as Dankmar Adler Louis Sullivan Frank Lloyd Wright Ludwig Mies van der Rohe Gordon Bunshaft and Louis Kahn For them the modernist ideal of functionality was incompletely realized if it did not wholly assimilate heating cooling ventilating and artificial lighting Bridging the history of technology and the history of architecture Siry discusses air conditioning s technical and social history and provides case studies of buildings by the master architects who brought this technology into the conceptual and formal project of modernism A monumental work by a renowned expert in American modernist architecture this book asks us to see canonical modernist buildings through a mechanical engineering oriented lens It will be especially valuable to scholars and students of architecture modernism the history of technology and American history

International façades Marcel Bilow, 2012-09-08 International Facades CROFT links the fields of architecture building services and building physics It aims at an international diversity in fa ade design to reduce energy consumption in building design Current architectural planning practices such as the International Style perceive the climate often as a problem rather than an opportunity to work with it This doctoral thesis presents a Facade Expert Tool FET that analyses the climate and the combination of the fa ade and building services The goal of FET is to easily analyse the climate of a particular location and to then limit the possible combination of fa ade and building services components to a practical level Through FET Marcel Bilow has developed Climate Responsive Optimised Facade Technologies CROFT CROFT demonstrates the potential for sustainable building operation through the use new technologies that respond to the requirements posed on fa ades in climate zones as diverse as those found in Moscow Singapore Berlin and Dubai

The Natural City Stephen B. Scharper, Ingrid Leman-Stefanovic, 2012-01-01 Urban and natural environments are

often viewed as entirely separate entities human settlements as the domain of architects and planners and natural areas as untouched wilderness This dichotomy continues to drive decision making in subtle ways but with the mounting pressures of global climate change and declining biodiversity it is no longer viable New technologies are promising to provide renewable energy sources and greener designs but real change will require a deeper shift in values attitudes and perceptions A timely and important collection The Natural City explores how to integrate the natural environment into healthy urban centres from philosophical religious socio political and planning perspectives Recognizing the need to better link the humanities with public policy The Natural City offers unique insights for the development of an alternative vision of urban life

Frontiers of Green Building, Materials and Civil Engineering III Jimmy Chih Ming Kao, Wen Pei Sung, Ran Chen, 2013-08-30 Selected peer reviewed papers from the Second International Conference on Green Building Materials and Civil Engineering GBMCE 2013 August 21-23 2013 Taiwan The Routledge Companion to Ecological Design Thinking Mitra Kanaani, 2022-08-31 This companion investigates the ways in which designers, architects and planners address ecology through the built environment by integrating ecological ideas and ecological thinking into discussions of urbanism, society, culture and design. Exploring the innovation of materials, habitats, landscapes and infrastructures, it furthers novel ecotopian ideas and ways of living, including human-made settings on water, in outer space and in extreme environments and climatic conditions. Chapters of this extensive collection on ecotopian design are grouped under five different ecological perspectives: design manifestos and ecological theories; anthropocentric transformative design concepts; design connectivity; climatic design; and social design. Contributors provide plausible sustainable design ideas that promote resiliency, health and well-being for all living things while taking our changing lifestyles into consideration. This volume encourages creative thinking in the face of ongoing environmental damage, with a view to making design decisions in the interest of the planet and its inhabitants. With contributions from over 79 expert practitioners, educators, scientists, researchers and theoreticians, as well as planners, architects and engineers from the U.S., Canada, Europe and Asia, this book engages theory, history, technology, engineering and science, as well as the human aspects of ecotopian design thinking and its implications for the outlook of the planet.

Culture and Customs of Mali Dorothea E. Schulz Ph.D., 2012-01-06 Touching on everything from its rich musical heritage to its varied cultural traditions, this is a thorough and accessible introduction to the contemporary lives of the different peoples who call Mali their home. Rated among the world's ten poorest nations, Mali has a glorious past and a less certain present. *Culture and Customs of Mali* touches on the first as background for understanding the second, exploring multiple facets of contemporary social life and cultural practices in this landlocked West African nation. The book offers an overview of diverse aspects of everyday social, cultural and religious life in Mali, paying particular attention to regional and ethnic variations. It shows how current social conventions and cultural values are the product of a centuries-long history, while at the same time dispels the common perception that African societies are rooted in unchanging tradition. Readers will come away with a better understanding of the multiple ways in which Malians, starting from their own customs and cultural foundations, integrate themselves into an international economic order and a globalized world of shared media images and cultural practices.

Future Cities Paul Dobraszczyk, 2025-03-15 Brings together architecture, fiction, film and visual art to reconnect the imaginary city with the real, proposing a future for

humanity that is firmly grounded in the present and the diverse creative practices already at our fingertips Though reaching ever further toward the skies today's cities are overshadowed by multiple threats climate change overpopulation social division and urban warfare all endanger our metropolitan way of life The fundamental tool we use to make sense of these uncertain city futures is the imagination Architects artists filmmakers and fiction writers have long been inspired to imagine cities of the future but their speculative visions tend to be seen very differently from scientific predictions flights of fancy on the one hand versus practical reasoning on the other In a digital age when the real and the fantastic coexist as near equals it is especially important to know how these two forces are entangled and how together they may help us best conceive of cities yet to come Exploring a breathtaking range of imagined cities submerged floating flying vertical underground ruined and salvaged *Future Cities* teases out the links between speculation and reality arguing that there is no clear separation between the two In the Netherlands prototype floating cities are already being built Dubai's recent skyscrapers resemble those of science fiction cities of the past while makeshift settlements built by the urban poor in the developing world are already like the dystopian cities of cyberpunk

Vernacular Traditions Aishwarya Tipnis, 2012-01-01 The book is an attempt to bridge the gap between the past and the future the vernacular and the contemporary It questions the relevance of the vernacular in contemporary times and illustrates the inherent sustainability in vernacular built form Emphasizing on the fact that apart

from the preservation of vernacular architecture it is more important to carry forward the valuable lessons of the past into the future the book presents myriad examples of contemporary architectural works and showcases how vernacular traditions can be reinterpreted to form contemporary buildings It encourages young designers to look within India for models of sustainable design rather than importing international designs which may or may not be relevant to the Indian context
