Climate Forcing Of Geological Hazards:

Climate Forcing of Geological Hazards Bill McGuire, Mark A. Maslin, 2012-12-10 Climate Forcing of Geological Hazards provides a valuable new insight into how climate change is able to influence modulate and trigger geological and geomorphological phenomena such as earthquakes tsunamis volcanic eruptions and landslides ultimately increasing the risk of natural hazards in a warmer world Taken together the chapters build a panorama of a field of research that is only now becoming recognized as important in the context of the likely impacts and implications of anthropogenic climate change The observations analyses and interpretations presented in the volume reinforce the idea that a changing climate does not simply involve the atmosphere and hydrosphere but also elicits potentially hazardous responses from the solid Earth or geosphere Climate Forcing of Geological Hazards is targeted particularly at academics graduate students and professionals with an interest in environmental change and natural hazards As such we are hopeful that it will encourage further investigation of those mechanisms by which contemporary climate change may drive potentially hazardous geological and geomorphological activity and of the future ramifications for society and economy Encyclopedia of Environmental Change John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences **Geomorphology and Natural Hazards** Timothy R. Davies, Oliver Korup, John J. Clague, 2021-04-19 Natural disasters are occasional intense events that disturb Earth's surface but their impact can be felt long after Hazard events such as earthquakes volcanos drought and storms can trigger a catastrophic reshaping of the

landscape through the erosion transport and deposition of different kinds of materials Geomorphology and Natural Hazards Understanding Landscape Change for Disaster Mitigation is a graduate level textbook that explores the natural hazards resulting from landscape change and shows how an Earth science perspective can inform hazard mitigation and disaster impact reduction Volume highlights include Definitions of hazards risks and disasters Impact of different natural hazards on Earth surface processes Geomorphologic insights for hazard assessment and risk mitigation Models for predicting natural hazards How human activities have altered natural hazards Complementarity of geomorphology and engineering to manage threats
