more nutrition sensitive The results show that instilling nutrition sensitivity into the operation of Afghanistan's food systems can only be accomplished if certain key measures are incorporated into the food system These include addressing the absence of knowledge in the population regarding healthy diets the lack of sufficient food for vulnerable populations weak irrigation systems capacity constraints at individual and institutional levels data challenges and weak natural resource management In addition the above weaknesses are compounded by the continued violence and conflict induced insecurity weak government and inadequate investments Given the role of different sectors in contributing to improved nutrition appropriate and effective multi stakeholder coordination and collaboration is paramount to such efforts
