Geoinformatics and Atmospheric Science Tomasz Niedzielski, Krzysztof Migała, 2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales

Jackson, 2009-03-12 Climate change and air quality are two of the most pressing issues facing Mankind This book gives undergraduate and graduate students and professionals working in the science and policy of pollution climate change and air quality a broad and up to date account of our understanding of the processes that occur in the atmosphere how these are changing as Man's relentless use of natural resources continues and what effects these changes are having on the Earth's climate and the quality of the air we breathe Written by an international team of experts this text gives an excellent overview of our current understanding of the state of the Earth's atmosphere and how it is changing It is an invaluable resource for students teachers and professionals Key features End of chapter questions Each chapter includes both basic concepts and more in depth material allowing faculty to direct students accordingly Most up to date treatment of key issues such as stratospheric chemistry urban air pollution and climate change **Climatology from Satellites** Eric Barrett, 2019-10-28

Originally published in 1974 was a pioneering study which summarized within the pre-existing framework of atmospheric knowledge the more significant findings that emerged from the first decade of climatological analyses of meteorological satellite data It shows how these data complement and extend the traditional coverage of climatology The book draws together in one volume research findings which were not previously available in book form and which significantly improve the understanding of climate especially in regions that were conventionally data remote Geographical Information and Climatology Pierre Carrega, 2013-05-13 This book includes two parts The first part is more theoretical and general and it covers fundamental principles geospatial climate data measurement spatial analysis mapping and climate geographical information remote sensing and climatology and geographical information for initialisation of forecasting and climate models The second part describes geographical information used in various climate applications of importance today related to risk urban climate air pollution hydrological problems linked to climatology forest fires *Field and Laboratory Methods in Primatology* Joanna M. Setchell, Deborah J. Curtis, 2003-09-18 Field and Laboratory Methods in Primatology is a manual for students and researchers studying wild primates Technological advances allow fieldworkers to collect a wide range of data store samples for later analysis and collect information remotely These methods open up opportunities to gain new insights

on previously studied populations and are the means of collecting data on species that have until now been difficult to study. However, information on the practicalities of using such methodology in the field has largely been lacking. Here, in this indispensable reference, experienced fieldworkers provide the first comprehensive guide to the wide variety of techniques available for the study of wild primates. Covering everything from pre-trip planning to laboratory analysis of endocrine and genetic samples, packed full of tips and emphasising practicalities and ethics throughout, it is a must-have for all field primatologists and others studying free-ranging animals.

Encyclopedia of World Climatology John E. Oliver, 2008-04-23. Today, given the well-publicized impacts of events such as El Niño, there is an unequaled public awareness of how climate affects the quality of life and environment. Such awareness has created an increasing demand for accurate climatological information. This information is now available in one convenient, accessible source: the Encyclopedia of World Climatology. This comprehensive volume covers all the main subfields of climatology, supplies information on climates in major continental areas, and explains the intricacies of climatic processes. The level of presentation will meet the needs of specialists, university students, and educated laypersons. A successor to the 1986 Encyclopedia of Climatology, this compendium provides a clear explanation of current knowledge and research directions in modern climatology. This new encyclopedia emphasizes climatological developments that have evolved over the past twenty years. It offers more than 200 informative articles prepared by 150 experts on numerous subjects, ranging from standard areas of study to the latest research studies. The relationship between climatology and both physical and social science is fully explored, as is the significance of climate for our future well-being. The information is organized for speedy access. Entries are conveniently arranged in alphabetical order, thoroughly indexed, and cross-referenced. Every entry contains useful citations to additional source materials. The Editor, John E. Oliver, is Professor Emeritus at Indiana State University. He holds a B.Sc. from London University and a M.A. and Ph.D. from Columbia University. He taught at Columbia University and then at Indiana State, where he was formerly Chair of the Geography/Geology Department and Associate Dean College of Arts and Sciences. He has written many books and journal articles in Climatology, Applied Climatology, and Physical Geography.
