These concepts include how the position of the sun at sunrise and sunset varies throughout the year. This will help you plan when and where to shoot. Using optics to predict where rainbows will appear, how polarizers will interact with reflections, and where to find spectacular light. How to use topographic maps and computerized mapping tools to help you find promising shooting locations in the wilderness. Calculating exposures, achieving correct exposure in high-contrast lighting situations, and the best digital darkroom techniques. With some practice and by applying the techniques that Randall teaches you, you will soon be ready to master the finer nuances of creating magnificent landscape photographs.
