

# Study Guide: Cell Biology

## Overview

Cell Biology is the study of cells, their physiological properties, their structure, the organization of their contents, interactions with their environment, and their functions. It differs from biochemistry in understanding biological processes.

## Key Concepts

### 1. Cell Theory

- All living organisms are composed of cells.
- The cell is the basic unit of life.
- All cells arise from pre-existing cells.

### 2. Types of Cells

- Prokaryotic Cells: Simple, unicellular organisms (e.g., bacteria) without a nucleus or membrane-bound organelles.
- Eukaryotic Cells: More complex cells with a nucleus and membrane-bound organelles (e.g., plant and animal cells).

### 3. Cell Structure and Functions

- Nucleus: Contains genetic material (DNA) and controls cell activities.
- Mitochondria: Powerhouse of the cell, site of cellular respiration and energy (ATP) production.
- Ribosomes: Sites of protein synthesis.
- Endoplasmic Reticulum (ER):
  - o Rough ER: Studded with ribosomes; involved in protein synthesis and processing.
  - o Smooth ER: Lacks ribosomes; involved in lipid synthesis and detoxification.
- Golgi Apparatus: Modifies, sorts, and packages proteins and lipids for transport.
- Cytoplasm: Contains organelles for digestion and waste removal.
- Cell Membrane: Protects the cell, regulates substances and factors.

### 4. Cell Division

- Mitosis: Process of cell division resulting in two identical daughter cells for growth and repair.
- Meiosis: Process of cell division that produces gametes (sexes) through two successive divisions.

### 5. Cell Metabolism

- Catabolism: Breakdown of molecules to release energy.
- Anabolism: Synthesis of molecules needed by the cell.
