The SAGES Manual of Evolving Techniques in Pancreatic Surgery Eugene P. Ceppa, Kevin M. El-Hayek, Melissa E. Hogg, Nicolò Pecorelli, 2025-03-29

Management of diseases of the pancreas is varied and complex and the diagnoses leading to surgical consideration dictate what technical approaches are feasible and safe. Over the last decade this has changed considerably and as a result the necessity of documenting the updated surgical approaches is not only warranted yet paramount to surgeons. This manual presents a contemporary description of pancreatic surgery. The classic open approach maintains relevancy yet refinement in technique has improved outcomes. The application of laparoscopic techniques provides improvement in recovery when applied appropriately yet further technological innovations continue to improve this approach. Further innovation and research in robotic percutaneous and endoscopic techniques have broadened the horizon of the management of pancreatic disease. Chapters in this manual address surgical therapy of benign and malignant disease of the pancreas including management of acute and chronic pancreatitis as well as benign premalignant and malignant pancreatic neoplasms and will focus on specific disease processes and the various approaches that are currently applied. Each of the chapters addresses patient selection, pre-operative considerations, technical conduct of the procedures and minimizing morbidity. A brief review of the existing literature addressing the particular topic is included in each chapter with extensive illustrations and selected video clips.

Ruptured Abdominal Aortic Aneurysm Benjamin W. Starnes, Manish Mehta, Frank J. Veith, 2017-01-10. This manual is designed to serve as the standard for the management of patients with ruptured abdominal aortic aneurysm (AAA) by means of modern techniques. All aspects are covered from pathogenesis, clinical presentation and diagnosis through to initial management, operative strategies, postoperative complications, outcomes and quality of life issues. The book is based on the experience gained at a leading U.S. institution, Harborview Medical Center, University of Washington, that treats up to 40 patients with ruptured AAA annually and is highly respected for its expertise in this medical emergency. The team at Harborview Medical Center has recently shown that the implementation of a structured protocol for the management of ruptured AAA with emphasis on an endovascular first strategy dramatically reduces mortality and complications. This has led to a sea change in the way in which patients are managed. There is an increasing hunger for information on these codified protocols and *Ruptured Abdominal Aortic Aneurysm: The Definitive Manual* will be invaluable for both surgeons and critical care physicians.

The SAGES Manual of Perioperative Care in Minimally Invasive Surgery Richard L. Whelan, James W. Fleshman, Dennis L. Fowler, 2006-01-16. The second SAGES Society of American Gastrointestinal and Endoscopic Surgeons manual was intended to be a companion piece for the successful first SAGES manual edited by Carol Scott Connor that was published more than 4 years ago. Originally the goal was to concentrate on tersely covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally invasive operations. It was also our intention to include a section for each procedure where several different port placement schemes would be presented and briefly discussed. Unique to this manual, the impact of the patient's body habitus, short or long, narrow or wide, on port placement is also taken into account for many of the procedures. Also unique are chapters devoted to

hypothermia port wound closure and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars Naturally the surgeon tends to focus on the technical aspects of the procedure such as the operative tasks to be carried out the order of operation and the position of the surgeon and assistant However it is critical that the surgeon be aware that the CO pneumoperitoneum far more so than laparotomy results in multiple physiologic alterations that if not compensated for by the anesthesiologist and surgeon may endanger the patient or prevent the laparoscopic completion of the procedure
