Climate of Extremes Patrick J. Michaels, Robert C. Balling, 2009 Michaels and Balling examine all aspects of the apocalyptic vision of climate change making headlines every day This includes news stories on hurricanes being pumped up by global warming the rapid melting of Greenland and Antarctica causing a sea level rise of 20 feet over the next 90 years the increasing pace of global warming and a swiftly growing number of heat wave related deaths Each of these pop culture icons of climate change turns out to be short on facts and long on exaggeration People who read *Climate of Extremes* will emerge well armed against an army of extremists hawking climate change as the greatest threat ever to our society and way of life

BOOK JACKET *Climate of Extremes* Patrick J. Michaels, Robert C. Balling Jr., 2009-01-28 There s a whole new world of global warming science today but few people hear about it In recent years an internally consistent body of scientific literature has emerged that argues cogently for global warming but against the gloom and doom vision of climate change But those who merely call attention to this literature are intimidated blacklisted and even driven from prestigious scientific employment Calling the current scientific environment a climate of extremes is an understatement It s a fact that there are fewer citations in the refereed scientific literature providing evidence for the moderate view of global warming but that s to be expected In *Climate of Extremes* climatologists Patrick J Michaels and Robert Balling Jr explain that climate science is hardly unbiased even though the global climate community itself believes that any new finding has an equal probability of making our climatic future appear more or less dire Michaels and Balling examine all aspects of the apocalyptic vision of climate change making headlines almost every day Hurricanes pumped up by global warming rapid melting of Greenland and Antarctica resulting in 20 feet of sea level rise in the next 90 years that global warming is occurring at an increasing pace and there is a massive increase in heat wave related deaths Each one of these pop culture icons of climate change turns out to be short on facts and long on exaggeration People who read *Climate of Extremes* will emerge well armed against an army of extremists hawking climate change as the greatest threat ever to our society and way of life

The Inquisition of Climate Science James Lawrence Powell, 2011 Modern science is under the greatest and most successful attack in recent history An industry of denial abetted by news media and information broadcasters has duped the American public into rejecting an overwhelming body of rigorously vetted scientific evidence showing that human caused carbon based emissions are linked to warming the Earth *The Inquisition of Climate Science* is the first book to comprehensively take on the climate science denial movement and the deniers themselves exposing their lack of credentials their extensive industry funding and their failure to provide any alternative theory to explain the observed evidence of warming In this book readers meet the most prominent deniers while dissecting their credentials arguments and lack of objectivity James Lawrence Powell exhibits deniers wide variety of deceptive rhetorical techniques many stretching back to ancient Greece Carefully researched fully referenced and compellingly written his book clearly proves the evidence of global warming is real

Hubris: The

Troubling Science, Economics, and Politics of Climate Change Michael Hart, 2015-09-29 The book explores problems and issues that have emerged in national and international discussion of policies to address climate change It concludes that every solution put forward by the UN and activists poses more problems than might ever emerge from the marginal human impact on natural climate change Rather than mitigation governments should focus on adaptation As is climate change discussions have become captive of a utopian agenda that is using climate change as a stalking horse to drive alarm in the hope that it will convince governments to act

The Politics of Global Climate Change Patrick M. Regan, 2015-11-17 In 2009 the US House of Representatives passed legislation requiring reductions in greenhouse gas emissions by 18 percent over the coming decade Later that year President Obama went to Copenhagen to sign a treaty requiring reductions by 50 percent over a two decade period The President came back with nothing no firm commitment to reduce emissions and only a vague target to hold global temperature rises to under 2 C How does a President who has a 75 vote majority in the House and a 19 vote majority in the Senate who has pre approval for a treaty reducing greenhouse gas production by 18 percent not achieve a treaty with at least the minimum goal of 18 percent reductions by 2020 Others have answered the puzzle by looking at institutional designs or negotiation dynamics This book articulates a multilevel process that starts with local politics to explain how they can influence international negotiations and why President Obama s efforts in Copenhagen were doomed to fail Understanding the role of local private interests can help form strategies for overcoming national resistance to climate change legislation and ultimately international agreements that could change the environmentally self destructive course we are on
