new ground in considering the financial sector's response to climate change looking at how market mechanisms and risk insurance can reduce its economic cost Climate Change and American Policy John R. Burch, Jr., 2016-08-26 Climate change has long been a contentious issue even before its official acknowledgment as a global threat in 1979 Government policies have varied widely from Barack Obama's dedication to environmentalism to George W Bush's tacit minimizing of the problem to Republican officials refusal to acknowledge the scientific evidence supporting anthropogenic climate change Presented chronologically this collection of important policy shaping documents shows how the views of both advocates and deniers of climate change have developed over the past four decades **Image Politics of Climate Change** Birgit Schneider, Thomas Nocke, 2014-06-15 Scientific research on climate change has given rise to a variety of images picturing climate change These range from colorful expert graphics model visualizations photographs of extreme weather events like floods droughts or melting ice symbols like polar bears to animated and interactive visualizations Climate change graphics have not only increased knowledge about the subject they have begun to influence popular awareness of global weather events The status of climate pictures today is particularly crucial as global climate change as a long term process cannot be seen When images are widely distributed they are able to shape how the world is thought about and seen It is this implicit basic assumption of the power of images to influence reality that this book addresses today's images might become the blueprint for tomorrow's realities Image Politics of Climate Change combines a wide interdisciplinary range of perspectives and questions treated here in sixteen interdisciplinary case studies The author's specializations include both visual practice and theory in the fields of climate sciences computer graphics art curating art history and visual studies communication and cultural science environmental and science technology studies The close interlinking of these viewpoints promotes in depth insights into issues of production and analysis of climate visualization **The Politics and Institutions of Global Energy Governance** Thijs Van de Graaf, 2013-10-04 From climate change over shale gas to the race for the Arctic energy makes headlines in international politics almost daily Thijs Van de Graaf argues that energy is in dire need of global governance He traces the history of international energy cooperation from the notorious Seven Sisters oil companies cartel to the recent creation of the International Renewable Energy Agency IRENA He analyses how international institutions have been created for securing oil rents coordinating consumer countries energy security policies promoting producer consumer dialogue managing regional gas markets and dealing with energy related environmental externalities Drawing on the emerging regime complexity literature he constructs a novel analytical framework to explain the fragmented architecture of global energy governance and studies prospects for institutional reform at the International Energy Agency IEA and the G8 G20 The Robbery of Nature John Bellamy Foster, Brett Clark, 2020-02-24 Bridges the gap between social and environmental critiques of capitalism In the nineteenth century Karl Marx inspired by the German chemist Justus von Liebig argued that capitalism's relation to its natural environment was that of a robbery system leading to an irreparable rift in the metabolism

between humanity and nature In the twenty first century these classical insights into capitalism s degradation of the earth have become the basis of extraordinary advances in critical theory and practice associated with contemporary ecosocialism In *The Robbery of Nature* John Bellamy Foster and Brett Clark working within this historical tradition examine capitalism s plundering of nature via commodity production and how it has led to the current anthropogenic rift in the Earth System Departing from much previous scholarship Foster and Clark adopt a materialist and dialectical approach bridging the gap between social and environmental critiques of capitalism The ecological crisis they explain extends beyond questions of traditional class struggle to a corporeal rift in the physical organization of living beings themselves raising critical issues of social reproduction racial capitalism alienated speciesism and ecological imperialism No one they conclude following Marx owns the earth Instead we must maintain it for future generations and the innumerable diverse inhabitants of the planet as part of a process of sustainable human development

Bringing together all the important issues surrounding the climate debate Nordhaus describes the science economics and politics involved and the steps necessary to reduce the perils of global warming Using language accessible to any concerned citizen and taking care to present different points of view fairly he discusses the problem from start to finish from the beginning where warming originates in our personal energy use to the end where societies employ regulations or taxes or subsidies to slow the emissions of gases responsible for climate change

Nordhaus offers a new analysis of why earlier policies such as the Kyoto Protocol failed to slow carbon dioxide emissions how new approaches can succeed and which policy tools will most effectively reduce emissions In short he clarifies a defining problem of our times and lays out the next critical steps for slowing the trajectory of global warming
