Climate Change In North America Regional Climate Studies:

Climate Change in North America George Ohring, 2014-02-12 This book describes thoroughly the North American Climate of the past 65 million years with special emphasis on the last 21 000 years as revealed by paleoclimatic observations and climate models It analyzes weather observations over the past century and satellite measurements of the last few decades to develop a picture of more recent climatic trends It explains how global climate models are used to simulate and project climate and presents the application of these models to reproduce recent climate variations and predict future North American climate It answers the critical question of whether observed climate change is due to natural variations or human activity

Physical Climate Science Since IPCC AR4 Markku Rummukainen, 2010 This report provides an update of the IPCC Fourth Assessment Report AR4 focusing on the physical climate system that in the IPCC work is addressed by its Working Group I The report considers progress in understanding of the human and natural drivers of climate change climate observations attribution key climate feedback as well as ocean acidification Recent developments and near future prospects of climate modelling are also discussed in brief Some of the key findings that the recent literature brings forth include Parts of the Greenland and Antarctic ice sheets have shown rapid melt over recent years Solar cycle effects on global temperatures are small compared to anthropogenic forcing More emerging research on the other CO2 problem ocean acidification Climate change may have significant effects on natural carbon sinks The report is written by four leading Nordic climate scientists Markku Rummukainen Jouni Rissanen Jens Hesselbjerg Christensen and Haldrup Björnsson on behalf of the Nordic ad hoc Group on Global Climate Negotiations The Nordic ad hoc Group on Global Climate Negotiations prepares reports and studies conducts meetings and organises conferences to support the Nordic negotiators in the UN climate negotiations The overall aim of the group is to contribute to a global and comprehensive agreement on climate change with ambitious emission reduction commitments

Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26 The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change It considers in situ and remote observations paleoclimate information understanding of climate drivers and physical chemical and biological processes and feedbacks global and regional climate modelling advances in methods of analyses and insights from climate services It assesses the current state of the climate human influence on climate in all regions future climate change including sea level rise global warming effects including extremes climate information for risk assessment and regional adaptation limiting climate change by reaching net zero carbon dioxide emissions and reducing other greenhouse gas emissions and benefits for air quality The report serves policymakers decision makers stakeholders and all interested parties with the latest policy relevant information on climate change Available as Open Access on Cambridge Core

Encyclopedia of Global Warming and Climate Change, Second Edition S. George Philander, 2012-07-10 This Second Edition of an academic yet

non technical resource examines the effects history and ongoing research in the important field of global warming and climate change Encyclopedia of Global Warming and Climate Change, Second Edition S. George Philander,2012-06-13

The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively **A National Strategy for Advancing Climate Modeling** Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on a National Strategy for Advancing Climate Modeling,2013-01-24

As climate change has pushed climate patterns outside of historic norms the need for detailed projections is growing across all sectors including agriculture insurance and emergency preparedness planning A National Strategy for Advancing Climate Modeling emphasizes the needs for climate models to evolve substantially in order to deliver climate projections at the scale and level of detail desired by decision makers this report finds Despite much recent progress in developing reliable climate models there are still efficiencies to be gained across the large and diverse U S climate modeling community Evolving to a more unified climate modeling enterprise in particular by developing a common software infrastructure shared by all climate researchers and holding an annual climate modeling forum could help speed progress Throughout this report several recommendations and guidelines are outlined to accelerate progress in climate modeling The U S supports several climate models each conceptually similar but with components assembled with slightly different software and data output standards If all U S climate models employed a single software system it could simplify testing and migration to new computing hardware and allow scientists to compare and interchange climate model components such as land surface or ocean models A National Strategy for Advancing Climate Modeling recommends an annual U S climate modeling forum be held to help bring the nation s diverse modeling communities together with the users of climate data This would provide climate model data users with an opportunity to learn more about the strengths and limitations of models and provide input to modelers on their needs and provide a venue for discussions of priorities for the national modeling enterprise and bring disparate climate science communities together to design common modeling experiments In addition A National Strategy for Advancing Climate Modeling explains that U S climate modelers will need to address an expanding breadth of scientific problems while striving to make predictions and projections more

accurate Progress toward this goal can be made through a combination of increasing model resolution advances in observations improved model physics and more complete representations of the Earth system To address the computing needs of the climate modeling community the report suggests a two pronged approach that involves the continued use and upgrading of existing climate dedicated computing resources at modeling centers together with research on how to effectively exploit the more complex computer hardware systems expected over the next 10 to 20 years **Climate Change 2007 - The Physical Science Basis** Intergovernmental Panel on Climate Change, Intergovernmental Panel on Climate Change. Working Group I., 2007-09-10 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provide the most comprehensive and balanced assessment of climate change available This IPCC Working Group I report brings us completely up to date on the full range of scientific aspects of climate change Written by the world's leading experts the IPCC volumes will again prove to be invaluable for researchers students and policymakers and will form the standard reference works for policy decisions for government and industry worldwide Uncertainty in Climate Change Research Linda O. Mearns, Chris E. Forest, Hayley J. Fowler, Robert Lempert, Robert L. Wilby, 2005-07-14 This edited volume with open access discusses all aspects of uncertainty in climate change research with a unique emphasis on decision making under uncertainty and the assessment of various uncertainties in the landscape of decision making By analyzing uncertainty through the lens of decision making the book seeks to understand and assess the various uncertainties inherent in climate change research including uncertainties in economic impacts human health and vulnerability fluctuations in the physical climate system changes in infrastructure and future climate projections Very little published material exists on the uncertainties regarding vulnerability of different populations to climate change and so the book characterizes the uncertainty in vulnerability to better formulate solutions to climate change problems in affected populations The volume will be of interest to students post docs early career scientists and researchers interested in all aspects of climate change After an introduction that addresses the issue of uncertainty in general as it pertains to climate change research the book is divided into 5 main sections Section 1 focuses on uncertainty in policy and decision making and how climate related policy choices impact risk management impact mitigation and adaptation Section 2 discusses uncertainty in climate change impacts including impacts in agriculture water resources transportation infrastructure and human health and vulnerability Section 3 analyzes physical climate uncertainties such as Earth system projections emissions concentrations and sea level rise projections Section 4 details the methods for quantifying uncertainty from a statistical perspective Section 5 concludes the volume with discussions on special topics and integrated themes on uncertainty including ethics and uncertainty communication the economics of climate change and integrated modeling for decision support Climate Change Impact and Adaptation in Agricultural Systems Jurg Fuhrer, Peter J Gregory, 2014-06-18 The focus of this book is future global climate change and its implications for agricultural systems which are the main

sources of agricultural goods and services provided to society These systems are either based on crop or livestock production or on combinations of the two with characteristics that differ between regions and between levels of management intensity In turn they also differ in their sensitivity to projected future changes in climate and improvements to increase climate resilience need to be tailored to the specific needs of each system The book will bring together a series of chapters that provide scientific insights to possible implications of projected climate changes for different important types of crop and livestock systems and a discussion of options for adaptive and mitigative management

Climate Change Policy in North America Neil Craik, Isabel Studer, Debora VanNijnatten, 2013-01-01 Climate Change Policy in North America is the first book to examine how cooperation respecting climate change can emerge within decentralized governance arrangements
