Climate Code Red The Case For Emergency Action:

Climate Code Red David Spratt, Philip Sutton, 2008-06-30 This meticulously documented call to action reveals extensive scientific evidence that the global warming crisis is far worse than officially indicated and that we are almost at the point of no return. Serious climate change impacts are already happening: large ice sheets are disintegrating, sea level rises will reach 5 metres this century, and we are seeing devastating species loss. It is no longer a case of how much more we can safely emit, but whether we can stop emissions and produce a deliberate cooling before the Earth's climate system reaches a point beyond any hope of human restoration. These imperatives are incompatible with politics as usual and business as usual; we face a sustainability emergency that urgently requires a clear break from the politics of failure inducing compromise.

Routledge Handbook of the Climate Change Movement Matthias Dietz, Heiko Garrelts, 2014-01-10 This handbook provides a comprehensive overview of the growing transnational climate movement. A dual focus on climate politics and civil society provides a hitherto unavailable broad and systematic analysis of the current global movement, highlighting how its dynamic and diverse character can play an important role in environmental politics and climate protection. The range of contributors, from well-known academics to activist scholars, look at climate movements in the developed and developing world, north and south, small and large, central and marginal. The movement is examined as a whole and as single actors, thereby capturing its scope, structure, development, activities, and influence. The book thoroughly addresses theoretical approaches from classic social movement theory to the influence of environmental justice frames and follows this with a systematic focus on region-specific NGOs and activists' cases and strategies, as well as relations with peripheral groups. In its breadth, balance, and depth, this accessible volume offers a fresh and important take on the question of social mobilization around climate change, making it an essential text for advanced undergraduates, postgraduate students, and researchers in the social sciences.

[The Anthropology of Climate Change](#) Hans Baer, Merrill Singer, 2014-04-24 In addressing the urgent questions raised by climate change, this book provides a comprehensive overview of the anthropology of climate change, guided by a critical political ecological framework. It argues that anthropologists must significantly expand their focus on climate change and their contributions to responding to climate change as a grave risk to humanity. The book presents a human socioecological framework for conceptualizing climate change. It examines the emergence and slow maturation of the anthropology of climate change, reviews the historic foundations for this work in the archaeology of climate change, and presents three alternative contemporary theoretical perspectives in the anthropology of climate change. The book synthesizes anthropological work and perspectives on climate change in the form of case studies in various regions of the world, revealing the nature of global climate change as constituting multiple and somewhat diverse changes in local settings. It explores the applied anthropology of climate change in terms of the ways anthropologists are contributing to climate policy, working with communities on climate change issues, as well as within the climate movement both internationally and nationally. Finally, it

provides an overview of what other the social sciences are saying about climate change and explores ways that the anthropology of climate change can interface with sociology political science and human geography in order to create an integrated social science of climate change This book gives researchers and students in Environmental Anthropology Climate Change Human Geography and Sociology a novel framework for understanding climate change that emphasizes human socioecological interactions *Facing the Climate Emergency, Second Edition* Margaret Klein Salamon,2023-05-30

Angus, 2016-07 Science tells us that a new and dangerous stage in planetary evolution has begun the Anthropocene a time of rising temperatures extreme weather rising oceans and mass species extinctions Humanity faces not just more pollution or warmer weather but a crisis of the Earth System If business as usual continues this century will be marked by rapid deterioration of our physical social and economic environment Large parts of Earth will become uninhabitable and civilization itself will be threatened Facing the Anthropocene shows what has caused this planetary emergency and what we must do to meet the challenge Bridging the gap between Earth System science and ecological Marxism Ian Angus examines

not only the latest scientific findings about the physical causes and consequences of the Anthropocene transition but also the social and economic trends that underlie the crisis Cogent and compellingly written Facing the Anthropocene offers a unique synthesis of natural and social science that illustrates how capitalism's inexorable drive for growth powered by the rapid burning of fossil fuels that took millions of years to form has driven our world to the brink of disaster Survival in the Anthropocene Angus argues requires radical social change replacing fossil capitalism with a new ecosocialist civilization

Climate Action Upsurge Stuart Rosewarne,James Goodman,Rebecca Pearse,2013-11-20 In the late 2000s climate action became a defining feature of the international political agenda Evidence of global warming and accelerating greenhouse gas emissions created a new sense of urgency and despite consensus on the need for action the growing failure of international climate policy engendered new political space for social movements By 2007 a climate justice movement was surfacing and developing a strong critique of existing official climate policies and engaging in new forms of direct action to assert the need for reduced extraction and burning of fossil fuels Climate Action Upsurge offers an insight into this important period in climate movement politics drawing on the perspectives of activists who were directly engaged in the mobilisation process Through the interpretation of these perspectives the book illustrates important lessons for the climate movement today In developing its examination of the climate action upsurge the book focuses on individual activists involved in direct action Climate Camps in Australia while drawing comparisons and highlighting links with climate campaigns in other locales The book should be of interest to scholars and researchers in climate change environmental sociology politics policy and activism
