640, white, male, wt. 47. The tubercle of the scapula is projecting in this case that it might very well pass for a head bone. It bears a small bone projecting from it outward and backward for a special facet for it; but whether it was joined to the scapula or glided on it in the tendon of the posterior third was not ascertained.

H. 252, female, white. The third scapula is fixed to the tubercle of the scapula so as to form a hook.

**Skeleton** Robert W. Mann,David R. Hunt,Scott Lozanoff,2016 Photographic Regional Atlas of Non Metric Traits and

Anatomical Variants in the Human Skeleton provides a unique collection of photographs derived from a broad array of novel skeletal specimens from across the globe. This atlas depicts skeletal features that are compiled to facilitate simple and direct access to some of the most interesting specimens currently known. This reference book is intended for clinicians, anatomists, anthropologists, forensic scientists, pathologists, biologists, and other allied medical professionals who are fascinated with the expression of morphological features of the skeleton. It is particularly useful to the human biologist investigating genetic relatedness among and between skeletal samples utilizing non-metric trait analyses since this atlas provides a comprehensive visual guide for not only the identification and nomenclature of skeletal morphological features but also for the appreciation of the range of anatomical expression. Photographic Regional Atlas of Non-Metric Traits and Anatomical Variants in the Human Skeleton draws from skeletal features observed from over 10 000 skeletons in collections throughout the world and provides a comprehensive yet concise presentation for rapid and reliable referral. Traits are arranged and presented based on skeletal region that facilitates ease of use for the reader when attempting to identify a feature of interest. Photographs are vividly displayed which enhances the reader's ability to compare the standard reference to a desired feature. The authors draw on their own decades of experience in skeletal anatomy to provide the best photographic atlas available for referencing daunting anatomical variations and non-metric trait morphology. As a result, Photographic Regional Atlas of Non-Metric Traits and Anatomical Variants in the Human Skeleton provides a one-of-a-kind reference that serves as a crucial component in the pursuit of skeletal anomaly research and education.

*Developmental Juvenile Osteology* Craig Cunningham, Louise Scheuer, Sue Black, 2016-07-26. *Developmental Juvenile Osteology* was created as a core reference text to document the development of the entire human skeleton from early embryonic life to adulthood. In the period since its first publication, there has been a resurgence of interest in the developing skeleton and the second edition of *Developmental Juvenile Osteology* incorporates much of the key literature that has been published in the intervening time. The main core of the text persists by describing each individual component of the human skeleton from its embryological origin through to its final adult form. This systematic approach has been shown to assist the processes of both identification and age estimation and acts as a core source for the basic understanding of normal human skeletal development. In addition to this core, new sections have been added where there have been significant advances in the field. Identifies every component of the juvenile skeleton by providing a detailed analysis of development and ageing and a detailed description of each bone in four ways: adult bone, early development, ossification, and practical notes. New chapters and updated sections covering the dentition, age estimation in the living, and bone histology. An updated bibliography documenting the research literature that has contributed to the field over the past 15 years since the publication of the first edition. Heavily illustrated including new additions.
