Nadler, Donald Rutherford, 2019-01-03 Oxford Studies in Early Modern Philosophy is an annual series presenting a selection of the best current work in the history of early modern philosophy It focuses on the seventeenth and eighteenth

centuries the extraordinary period of intellectual flourishing that begins very roughly with Descartes and his contemporaries and ends with Kant It also publishes papers on thinkers or movements outside of that framework provided they are important in illuminating early modern thought The articles in OSEMP will be of importance to specialists within the discipline but the editors also intend that they should appeal to a larger audience of philosophers intellectual historians and others who are interested in the development of modern thought

The Metaphysics of Resurrection in Seventeenth-Century Philosophy Jon W. Thompson, 2022-11-14 This book provides a new account of the emergence of the philosophy of personal identity in the early modern period Reflection on personal identity is often thought to have begun in earnest with John Locke's famous consciousness based account published in the 2nd Edition of the Essay in 1694 The present work argues that we ought to understand modern notions of personal identity including Locke's own as emerging from within debates about the metaphysics of resurrection across the seventeenth century It recovers and analyses theories of personal identity and resurrection in Locke and Leibniz as well as largely forgotten theories from the Cambridge Platonists Thomas Jackson and Francisco Suarez The book narrates a time of radical change in conceptions of personal identity the period begins with a near consensus on hylomorphism according to which the body is an essential metaphysical part of the person The re-emergence of platonism in the period then undermines the centrality of the body for personal identity and this lays the groundwork for a more thoroughly psychological account of personal identity in Locke This work represents the first scholarly study to thoroughly situate early modern conceptions of personal identity embodiment and the afterlife within the context of late scholasticism Finally due to its focus on the arguments of the authors in question the work will be of interest to philosophers of religion as well as historians of philosophy

The Self, 2021-08-03 *The Self* A History explores the ways in which the concept of an I or a self has been developed and deployed at different times in the history of Western Philosophy It also offers a striking contrast case the interconnected self who appears in some expressions of African Philosophy The I or self seems engulfed in paradoxes We are selves and we seem to be conscious of ourselves yet it is very difficult to say what a self is Although we refer to ourselves when we try to find or locate ourselves the I seems elusive We can find human bodies but we do not refer to ourselves by referring to our bodies we do not know that we are raising our hands or thinking hard by looking at our arms or catching a glimpse of our furrowed brows in a mirror The essays in this volume engage many philosophical resources metaphysics epistemology phenomenology philosophy of psychology and philosophy of language to try to shed needed light on these puzzles

Spiritual Exercises and Early Modern Philosophy Simone D'Agostino, 2023-09-20 In his renowned collection *Philosophy as a Way of Life* Pierre Hadot suggests that the original aspect of philosophy as a method by which one exercises oneself to achieve a new way of living and seeing the world falls with the rise of modernity In that period philosophy becomes increasingly theoretical tending toward a system However Hadot himself glimpses at the dawn of modernity some instances of the original aspect of philosophy still very much present and in his wake Michel Foucault warns that between the late 16th and early 17th centuries the philosophical question of the reform of the mind attests to a still very close link between asceticism and access to truth This book aims to develop just such an idea by thoroughly analyzing the most representative works of the reform of the mind in the early modern period Francis Bacon's

New Organon 1620 Ren Descartes Discourse on the Method 1637 and Baruch Spinoza s Treatise on the Emendation of the Intellect 1677 From this analysis it will emerge that these modern works fully deserve to be counted among the tradition of philosophy as way of life On closer inspection the inquiries about method elaborated in these works are fully understandable only when read in the light of a broader and more complex philosophical need to establish the spiritual conditions for accessing truth and aspiring to full self realization

In Pursuit of Wisdom Phillip Campbell III,2024-06-21 The relationship between the Catholic Church and science is one of the most misunderstood stories of Western civilization Merely repeating the mantra that there is no ultimate contradiction between faith and reason has not solved the crisis for millions of Catholics many of whom have abandoned the Faith over perceived discrepancies between the religious and scientific world In Pursuit of Wisdom moves beyond polemical and surface level approaches to glean a more accurate picture of the historical relationship between scientific inquiry and the Catholic Faith Beginning with the earliest days of the Church proceeding through the Middle Ages Renaissance and beyond Catholic history author Phillip Campbell tells the stories of brilliant individuals challenging controversies and awe inspiring discoveries that form the tapestry of the Church s rich engagement with science When we understand people and perspectives of the past we can better understand how we arrived at our current situation and be prepared to respond to the questions of those both within and outside the Church who believe that faith and reason are incompatible

Spatial Theories for the Americas Fernando Luiz Lara,2024-11-19 To study the built environment of the Americas is to wrestle with an inherent contradiction While the disciplines of architecture urban design landscape and planning share the fundamental belief that space and place matter the overwhelming majority of canonical knowledge and the vernacular used to describe these disciplines comes from another very different continent With this book Fernando Luiz Lara discusses several theories of space drawing on cartography geography anthropology and mostly architecture and proposes counterweights to five centuries of Eurocentrism The first part of Spatial Theories for the Americas offers a critique of

Eurocentrism in the discipline of architecture problematizing its theoretical foundation in relation to the inseparability of modernization and colonization The second part makes explicit the insufficiencies of a hegemonic Western tradition at the core of spatial theories by discussing a long list of authors who have thought about the Americas To overcome centuries of Eurocentrism Lara concludes will require a tremendous effort but nonetheless we have the responsibility of looking at the built environment of the Americas through our own lenses Spatial Theories for the Americas proposes a fundamental step in that direction Latin and Music in the Early Modern Era Robert Forgács,2021-05-31 Situating the close relationship between Latin and music within its historical context this volume presents an overview of Latin and music in the educational system of the time schools choir schools and universities and the development and pervasive influence of musical humanism This influence is seen primarily in the writings of music theorists the documents of dedication found in music publications and above all in the settings of classical and Neo Latin texts as well as in some liturgical and extra liturgical ones Discussion of this repertoire forms the centre of the volume The emphasis is on practical matters the study of Latin and music and the music s composition performance and reception **The Digital, a Continent?** Vera Bühlmann,2023-12-18 In The Digital a Continent the author argues in favor of a way of thinking about digital technology that draws on the new materialism She uses photosynthesis and nuclear fission as examples of processes that are as artificial as they are natural to explain how digital technology can be viewed within the paradigm of a communicative physics in which poetics interacts with mathematical thinking The author concludes that we can better understand ourselves and digital technology by developing notions of the multifaceted ways energy form and intellect interact in global architectonics Theoretical consideration of digital technology Visual language and science New volume in the Applied Virtuality Book Series **The Devotion of Collecting** Forrest C. Strickland,2023-01-16 The history of the Netherlands in the seventeenth century cannot be adequately told without considering ministers understanding of print and how they used print to encourage godliness and the nature of their personal libraries This study is built upon an examination of 234 auction catalogues of ministerial collections nearly all that are known to survive and the transcription of fifty five of these catalogues Libraries were possessions of central importance to the ministers who owned them Knowing the kinds of print with which ministers interacted provides us with valuable insights into the daily life of a minister and the culture of the era So what books did these central theological figures own and how did they use them *Sellars and the History of Modern Philosophy* Luca Corti,Antonio M.
