Key Features Corrects the distorting stereotypical representations of Mendelian genetics and provides an authentic picture of how science is done focusing on Gregor Mendel and his actual contributions to science Explains how the oversimplifications of Mendelian genetics were exploited by ideologues to provide the presumed scientific basis for eugenics Proposes a shift in school education from teaching how the science of genetics is done using model systems to teaching the complexities of development through which heredity is materialized

Evolution and the Emergent Self Raymond L. Neubauer, 2012 This book examines how humans evolved from the cosmos and prebiotic earth and what types of biological chemical and physical sciences drove this complex process The author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content first in genes and then in brains
