Internet Architecture and Innovation Barbara Van Schewick,2012-08-24 A detailed examination of how the underlying technical structure of the Internet affects the economic environment for innovation and the implications for public policy Today following housing bubbles bank collapses and high unemployment the Internet remains the most reliable mechanism for fostering innovation and creating new wealth The Internet s remarkable growth has been fueled by innovation In this pathbreaking book Barbara van Schewick argues that this explosion of innovation is not an accident but a consequence of the Internet s architecture a consequence of technical choices regarding the Internet s inner structure that were made early in its history The Internet s original architecture was based on four design principles modularity layering and two versions of the celebrated but often misunderstood end to end arguments But today the Internet s architecture is changing in ways that deviate from the Internet s original design principles removing the features that have fostered innovation and threatening the Internet s ability to spur economic growth to improve democratic discourse and to provide a decentralized environment for social and cultural interaction in which anyone can participate If no one intervenes network providers interests will drive networks further away from the original design principles If the Internet s value for society is to be preserved van Schewick argues policymakers will have to intervene and protect the features that were at the core of the Internet s success
