Cancer Immunotherapy Immune Suppression And Tumor Growth:

Cancer Immunotherapy George C. Prendergast, Elizabeth M. Jaffee, 2011-04-28 There has been major growth in understanding immune suppression mechanisms and its relationship to cancer progression and therapy This book highlights emerging new principles of immune suppression that drive cancer and it offers radically new ideas about how therapy can be improved by attacking these principles Following work that firmly establishes immune escape as an essential trait of cancer recent studies have now defined specific mechanisms of tumoral immune suppression It also demonstrates how attacking tumors with molecular targeted therapeutics or traditional chemotherapeutic drugs can produce potent anti tumor effects in preclinical models This book provides basic translational and clinical cancer researchers an indispensable overview of immune escape as a critical trait in cancer and how applying specific combinations of immunotherapy and chemotherapy to attack this trait may radically improve the treatment of advanced disease Offers a synthesis of concepts that are useful to cancer immunologists and pharmacologists who tend to work in disparate fields with little cross communication Drs Prendergast and Jaffee are internationally recognized leaders in cancer biology and immunology who have created a unique synthesis of fundamental and applied concepts in this important new area of cancer research Summarizes the latest insights into how immune escape defines an essential trait of cancer Includes numerous illustrations including how molecular targeted therapeutic drugs or traditional chemotherapy can be combined with immunotherapy to improve anti tumor efficacy and how reversing immune suppression by the tumor can cause tumor regression

Tumor-Induced Immune Suppression Dmitry I. Gabrilovich, Arthur Andrew Hurwitz, 2014-02-10 Tumor Induced Immune Suppression Prospects and Progress in Mechanisms and Therapeutic Reversal presents a comprehensive overview of large number of different mechanisms of immune dysfunction in cancer and therapeutic approaches to their correction This includes the number of novel mechanisms that has never before been discussed in previous monographs The last decades were characterized by substantial progress in the understanding of the role of the immune system in tumor progression Researchers have learned how to manipulate the immune system to generate tumor specific immune response which raises high expectations for immunotherapy to provide breakthroughs in cancer treatment It is increasingly clear that tumor induced abnormalities in the immune system not only hampers natural tumor immune surveillance but also limits the effect of cancer immunotherapy Therefore it is critically important to understand the mechanisms of tumor induced immune suppression to make any progress in the field and this monograph provides these important insights

Oxford Textbook of Cancer Biology

Francesco Pezzella, Mahvash Tavassoli, David Kerr, 2019-05-02 The study of the biology of tumours has grown to become markedly interdisciplinary involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians The Oxford Textbook of Cancer Biology brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field Structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of cancer development The book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows It explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease The book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving Edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the

wide variety of sub disciplines that make up today s cancer research and treatment community It is written not only for consultation but also for easy cover to cover reading **Innate Immune Regulation and Cancer Immunotherapy** Rong-Fu Wang,2012-02-02 Innate and adaptive immunity play important roles in immunosurveillance and tumor destruction However increasing evidence suggests that tumor infiltrating immune cells may have a dual function inhibiting or promoting tumor growth and progression Although regulatory T Treg cells induce immune tolerance by suppressing host immune responses against self or non self antigens thus playing critical roles in preventing autoimmune diseases they might inhibit antitumor immunity and promote tumor growth Recent studies demonstrate that elevated proportions of Treg cells are present in various types of cancers and suppress antitumor immunity Furthermore tumor specific Treg cells can inhibit immune responses only when they are exposed to antigens presented by tumor cells Therefore Treg cells at tumor sites have detrimental effects on immunotherapy directed to cancer **Immunosuppression and Immunomodulation** Rajeev K. Tyagi,Prakriti Sharma,Praveen Sharma,2023-07-12 This book synthesizes the key concepts of immunosuppression and immunomodulation A comprehensive understanding of these processes is necessary to develop vaccines and therapeutic interventions for diseases This book examines the role of information molecules such as cytokines and chemokines and other proteins secreted by the host upon interacting with the pathogen s that modulate and suppress the immune system and assist the pathogen s in causing disease Chapters discuss the modulation of inflammation signaling pathways the interaction of immune cells and resulting immunity as well as its suppression **Cancer Immunotherapy Principles and Practice, Second Edition** Lisa H. NK Cell-Based Cancer Immunotherapy Francisco Borrego, Susana Larrucea, Rafael Solana, Raquel Tarazona, 2016-09-08 Natural killer NK cells are innate lymphoid cells that have a significant role in regulating the defenses against cancer development and certain viral infections They are equipped with an array of activating and inhibitory receptors that stimulate or diminish NK cell activity respectively Inhibitory receptors include among others the MHC class I ligands killer cell immunoglobulin like receptors KIR in humans and members of the Ly49 family of receptors in mice and CD94 NKG2A Activating receptors include cytokine and chemokine receptors and those that interact with ligands expressed on target cells such as the natural cytotoxicity receptors or NCRs NKp30 NKp44 and NKp46 NKG2D CD244 and DNAM 1 In addition NK cells express Fc RIIIA or CD16 the receptor that exerts antibody dependent cell mediated cytotoxicity ADCC NK cells also express the death ligands FasL and TRAIL The killing or sparing of target cells depends on the integration of distinct signals that originate from NK cell receptors NK cells spare healthy cells that express normal levels of MHC class I molecules and low amounts of stress induced self molecules whereas they kill target cells that down regulate MHC class I molecules and or up regulate stress induced self molecules The latter are common signatures of virus infected cells and tumors All the accumulated knowledge on NK cell biology along with many clinical observations is driving multiple efforts to improve the arsenal of NK cell based therapeutic tools in the fight against malignant diseases Indeed NK cell based immunotherapy is becoming a promising approach for the treatment of many cancers It is well known that NK cells have a significant role in the anti tumor effect of therapeutic antibodies that use ADCC as a mechanism of action In addition to this administration of autologous and allogeneic NK cells after activation and expansion ex vivo is used in the treatment of cancer Moreover adoptive transfer of NK cell lines has been tested in humans

and genetically modified NK cells expressing chimeric antigen receptors are being studied in preclinical models for potential use in the clinic *The Role of Complement in Tumors* Barbara Rolfe, Ruben Pio, Trent M. Woodruff, Maciej M. Markiewski, Helga D. Manthey, 2020-03-23
