Intellectual Property and Biodiversity Michelangelo Temmerman, 2011-12-12 Biotechnology is at the heart of heated debates about ethics safety economic development and about the control over the biological materials and technologies used The latter grossly called biodiversity issues relating to the application of intellectual property has been the subject of a wealth of literature Yet the situation of animal genetic resources specifically has only marginally been addressed so far Many books and articles address biotechnology and agriculture but have only plants and seeds in mind Case law and specific regulation is equally scarce Exacerbated by the so called erosion of animal genetic resources climate change the globalization of the market place and a strong concentration of markets animal genetic resources however demand specific analysis and adjustments in intellectual property law The decoupling of rights over animal genetic resources as an abstract concept from those over the concrete animals is a fact today The application of patents in this context became a full fledged part of the management of animal genetic resources This monograph analyzes against this background the impact of the patent system on ownership traditions in agriculture on animal welfare and on biodiversity It looks at how those factors in turn are likely to affect the shape of patent law and how they should affect it The author hereby focuses on important specific issues arising including the following the underlying elements deciding on the shape of regulation innovation economic development agriculture human rights animal welfare the conservation of resources

and equal trading conditions the continuing applicability of trademarks geographical indications copyright and trade secrets patentability rules and exclusions the extension of patent rights over progeny the meaning of essentially biotechnological processes the legal definitions of morality and ordre public in the context of animal welfare and the future of international patent law in the context of global governance theories With detailed investigation of how three major jurisdictions the European Union the United States and Canada have regulated the matter the book highlights unresolved issues in the laws dealing with animal genetic resources How do the usual principles of patent law affect ownership over animals in agriculture To what extent is patent law in accordance with neighbouring fields of regulation with relation to animal welfare How can intellectual property be used to alter stimulate or tackle developments in the realm of the conservation and promotion of biodiversity Questions like these are asked checked upon the more technical country studies and then used to put to test the adequacy of international patent regulation in a final chapter As a deeply informed overview of the arguments and discussion points this is the only book of its kind It links general discussions to the often technical and complicated patent regulations in the specific context of animal genetic resources It is sure to bring lawyers in the field closer to the policy debates and decision makers closer to the precise idiosyncrasies of patent law

Human Dna: Law and Policy Bartha Maria Knoppers, Claude M LaBerge, Marie Hirtle, 1997-07 Human DNA Law and Policy provides the first international debate on a topic of universal concern No book has brought together such a diverse range of multidisciplinary ethical and legal expertise on the highly controversial issues surrounding the use storage exchange and sale of the very stuff of which we are made human genetic material Testing of human genetic material involves a variety of samples pathological samples newborn screening samples samples leftover after testing and research samples shared around the world This places consent issues on an individual familial and societal level The comparative and international perspectives presented reveal the transnational nature of genetic studies This book focuses on the issues of DNA sampling and testing consent and confidentiality banking policies genetic epidemiology and diversity Since financial and technological pressures are inextricably linked to human genetics research commercialization and patents are also examined Academic researchers policy makers and industry will benefit from the learned papers and reports of the discussion which is rich in diversity of opinion controversial in the diversity of policy and approaches presented anchored on scientific facts and yet sensitive to cultural political and economic differences

Resistance Is Fertile Wilhelm Peekhaus, 2013-03-13 For decades government industry and the mainstream media have extolled the virtues of biotechnology while downplaying its negative side effects Focusing on agriculture *Resistance Is Fertile* challenges this dominant rhetoric by analyzing the major issues around which opponents of biotechnology in Canada are mobilizing resistance namely the enclosure of the biological and the knowledge commons which together form the BioCommons What emerges is an empirically and theoretically informed analysis of Canada's regulatory regime the corporate control of seeds and attempts to construct and control public discussions about agricultural

biotechnology **Intellectual Property Law in Canada** Mistrale Goudreau, 2017-06-20 Derived from the renowned multi volume International Encyclopaedia of Laws this monograph provides a survey and analysis of the rules concerning intellectual property rights in Canada It covers every type of intellectual property right in depth copyright and neighbouring rights patents utility models trademarks trade names industrial designs plant variety protection chip protection trade secrets and confidential information Particular attention is paid throughout to recent developments and trends The analysis approaches each right in terms of its sources in law and in legislation and proceeds to such legal issues as subject matter of protection conditions of protection ownership transfer of rights licences scope of exclusive rights limitations exemptions duration of protection infringement available remedies and overlapping with other intellectual property rights The book provides a clear overview of intellectual property legislation and policy and at the same time offers practical guidance on which sound preliminary decisions may be based Lawyers representing parties with interests in Canada will welcome this very useful guide and academics and researchers will appreciate its value in the study of comparative intellectual property law **Can You Make Money with Your Idea or Invention?** Donald Lunny, 1993 Trade, Investment, Innovation and their Impact on Access to Medicines Locknie Hsu, 2016-02-12 The last two decades have seen great economic change in Asia and this has impacted upon the vexed question of access to affordable healthcare and medicines in many Asian states In this book Locknie Hsu examines the issue of access to medicines in Asia from a fresh perspective which embraces trade and investment law innovation intellectual property law competition policy and public health issues Hsu explores the key evolving legal issues in these areas including ASEAN integration free trade agreement negotiations such as those for the TPP bilateral investment agreements and significant court decisions The book goes on to present proposals for steps to be taken in addressing access to medicines in Asia and will be useful to academic researchers regulators law makers and global organizations involved in the issues surrounding access to affordable healthcare and medicines
