Product Overview

The Siemens — Fire Safety Manual Fire Alarm Boxes (Models MS1-10B and MS1-20B), which operate with the FireFinder XLB and MXL fire alarm control panels (FACP's), provide the most advanced method of address programming and supervision currently available in the fire industry. Models MS1-10B and MS1-20B are the essence of an intelligent initiating device through the built-in, microcomputer-chip technology of each box, as well as sophisticated, bi-directional communications capabilities with FireFinder XLB and MXL FACP's.

Specifications

Models MS1-10B and 20B are constructed of durable molded polycarbonate material, which is made fireproof in red with raised white lettering. The housing accommodates a 'pull-down' lever which — when operated — locks in position, indicating the manual fire alarm line has been activated.

The pull-down lever remains down and locked, until each intelligent manual fire alarm line is reset, via first opening the forged housing cover with an Allen Key, followed by closing and locking the cover.

Siemens — Fire Safety's innovative technology also allows all Model MS1-series Intelligent Manual Fire Alarm Boxes to be programmed via the Model DPU Programmer / Tester. The Model DPU Programmer / Tester is a compact, portable and micro-driven accessory that makes programming and testing a manual fire alarm box more efficient, reliable and quicker than previous methods.

Model DPU eliminates the need for the device's mechanical addressing mechanisms (such as program jumpers, dip switches or rotary dials) because Model DPU electronically sets the pull station's microcomputer chip's nonvolatile memory.
