Johnson, 1994 **Identification of Sleep Deprivation from Single-Channel EEG Using Machine Learning Methods**, 2022 Effects of Prolonged Stage Four and 1-REM Sleep Deprivation Robert L. Williams, H. W Agnew (Jr), Wilse B. Webb, FLORIDA UNIV GAINESVILLE., USAF School of Aerospace Medicine, 1967 Two experiments are described which demonstrated the effects of extended stage 4 sleep deprivation and separately the effects of 1 REM sleep deprivation Measurements of the sleep EEG and measurements of personality variables revealed that these two types of sleep deprivation are quite different Stage 4 deprivation resulted in a sharp increase in stage 2 on deprivation nights while 1 REM deprivation resulted in an increase in stage 1 without rapid eye movements Stage 4 deprivation produced a depressive psychologic profile in the subjects while 1 REM deprivation resulted in a state of increased irritability and emotional lability **An EEG Sleep-scoring Analyzer Based Upon Zero-crossing Period Coding Techniques** Barry L. Mitchell (CAPT, USAF.), 1973 *Changes in EEG, Temperature, and Behavior as a Function of Prolonged Sleep Deprivation* G. Vernon Pegram, 1967 Effects of Sleep Deprivation on EEG-based Measures of Criticality and Complexity Asaf Harel, 2017 Sleep deprivation is known to adversely affect basic cognitive abilities such as object recognition and decision making It affects the dynamics of neuronal networks in the brain and can even lead to hallucinations and epileptic seizures Several lines of evidence indicate that it modifies the balance of excitation and inhibition in neural circuits and it is hypothesized that the functional role of sleep is to restore this balance Assessing the effects of sleep deprivation using non invasive measurements of brain activity provides novel insights into the dynamical changes that take place in the brain In this study we quantified the effects of sleep deprivation using novel EEG based measures based on

the concepts of criticality and complexity We also looked at correlations between the EEG based measures and behavioral measures such as reaction time in a psychomotor vigilance task PVT and several cognitive tests Significant changes in both criticality based parameters and entropy based complexity measures have been found and are correlated with the different sleep deprivation states These correlations provide further insights into the relationship between the changes in the underlying dynamics and cognitive manifestations
