

Children Autism Rating Scale, 3rd Edition

The CARS-3 gathers information about specific characteristics typically noted in children with autism spectrum disorders in three main areas (restricted/repetitive behaviors, social interaction, and social communication) in addition to gathering information about emotional responses, cognitive style, and maladaptive speech. Restricted/Repetitive behaviors are stereotyped behaviors, fixated interests, routines, or rituals. Social Interaction measures social behaviors. Social Communication measures the individual's responses to social situations and understanding of the intent of social interaction and communication. Emotional Responses measures extreme emotional responses to everyday situations. Cognitive Style measures idiosyncratic fixated interests, characteristics, and cognitive abilities. Maladaptive Speech describes deficits and idiosyncrasies in verbal communication.

Each rater is asked to rate the behavioral descriptions reflective of their observations as: 1. Not at all like the individual; 2. Not much like the individual; 3. Somewhat like the individual; or 4. Very much like the individual. The following charts reflect (STUDENT) rater scores on the subtests as well as composite scores associated with likelihood of the Autism Spectrum Diagnosis and level of severity.

Composite Scores were computed using both a four score Autism Index and a six score Autism Index. Autism Index scores of 75-100 indicate a "Very Likely" probability of ASD and reflects Severity Level 2. Autism Index scores equal or greater than a score of 100 indicate a "Very Likely" probability of ASD and a Severity Level of 3.

Assessing Children's Well-Being Sylvie Naar-King, Deborah A. Ellis, Maureen A. Frey, Michele Lee Ondersma, 2003-10-17 Behavioral medicine has now matured as a field to the point where all recognize that different populations are presented with different issues Psychological reactions and patterns affect the health and well being of children as well as adults and numerous standardized instruments for the assessment of a variety of areas of children s functioning are currently available Yet it can be difficult for practitioners and researchers searching through general compendia of resources for child assessment which are frequently focused on general techniques rather than specific instruments to identify the optimal ones to meet their particular needs and to choose among them This practical and comprehensive reference guide is the first to

sort present and review all the measures that can be used to evaluate the behavioral cognitive and emotional aspects of children's health. It organizes the measures under eight general headings such as quality of life, adherence, pain management, and patient satisfaction. Each chapter begins with a leading authority's overview of the underlying theoretical construct and any concerns about how to measure it. Descriptions and reviews of relevant instruments follow; these include information on administration, scoring, psychometric properties, and ordering, as well as comments by the instruments' developers. *Assessing Children's Well-Being: A Handbook of Measures* will be welcomed by all those professionals and scientists who seek to assess and effectively address the complex interactions between physical health and mental health in children.
