Coding For Pulmonary Function Tests

1. CPT Codes for Spirometry Test

Spirometry is a type of pulmonary function test (PFT) that measures how much air a person can exhale and how quickly they can do so. It's a common test used to diagnose and monitor respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and lung fibrosis. There are several CPT codes related to spirometry, which healthcare providers use to bill for this service. Here's a breakdown of what each code represents:

- **94010:** This code is used for a basic spirometry test, which measures how much air a patient can exhale in one breath.
- **94011:** This code is used for a prolonged spirometry test, which measures how much air a patient can exhale over a longer period of time.
- **94012:** This code is used for a spirometry test with a bronchodilator, which measures how much air a patient can exhale before and after using a medication that opens up the airways.
- **94060:** This code is used for a spirometry test with a pre- and post-bronchodilator, which measures how much air a patient can exhale before and after using a bronchodilator medication.
- **94070:** This code is used for a spirometry test with a bronchial challenge, which measures how the airways respond to a substance that may trigger asthma symptoms.
- **94150:** This code is used for a comprehensive respiratory assessment, which may include spirometry as well as other tests to evaluate lung function.
- **94200:** This code is used for maximal voluntary ventilation (MVV) testing, which measures how much air a patient can inhale and exhale in one minute.
