Quality Indicators American Psychiatric Association,2008-08-13 The past decade has witnessed remarkable growth in the field of quality measurement in health care Today s patients want to know that the care they receive is safe effective and accessible This compelling monograph combines for the first time the reports from two American Psychiatric Association task forces on quality in psychiatric care March 1999 which focused on adults and October 2001 which focused on children and adolescents offering a clinical framework for quality measurement that provides sample indicators of quality for health plans facilities and systems of care Using similar formats and definitions each task force considered a matrix of priority areas of care including specific patient populations e g elderly seriously and persistently mentally ill developmentally disabled people and diagnostic categories e g depressive disorder schizophrenia substance use disorders Each then examined important aspects of patient care and constructed a quality framework that included dimensions of access quality appropriateness of care perception of

care satisfaction outcome and for the children's report prevention. Each task force also considered relevant methodological issues: cultural, linguistic and ethnic differences; data collection and tracking; confidentiality of data; risk adjustment; use of rating scales and standardized instruments; and designation of standards. Sample recommended goals include: For adults, patients with serious and persistent mental illness should have access to newer generations of antipsychotic medications as these become available; patients should achieve a significant reduction in symptom. For children and adolescents, the mental health status of children and adolescents should be assessed annually; children with severe or persistent mental illness whose care involves multiple child-serving systems; caregivers and service providers should have their care coordinated. Sample indicators include: For adults, utilization of new antipsychotics for patients with the diagnosis of schizophrenia; reduction in frequency of panic attacks in patients with the diagnosis of panic disorder. For children and adolescents, high levels of satisfaction of adolescents using mental health services or substance abuse services; reduction in a family's stress level and impact of illness. As the initial step in what must be an evolving effort by clinicians to define, measure, report and improve the care that patients and their families receive, this monograph is essential reading for those who provide and receive care, accredit and regulate care, and purchase and administer clinical services. Purchasers of mental health care want clear, reliable, meaningful and comparable information on what care is provided and with what results. APA convened these two task forces to lend its professional expertise to that issue, to advise on how to develop clinically based, patient-focused quality indicators that use existing and ongoing research and clinical consensus in selecting potential indicators.

Primary health care and continuous quality improvement Alison Laycock, Ross Bailie, Lynette O'Donoghue, 2025-06-01. For most people, the main point of access to the health system is through primary health care (PHC). The fundamental premise of primary health care is that all people everywhere have the right to receive the appropriate care in their community. Primary health care attends to the majority of a person's health needs throughout their lifetime, including physical, mental and social wellbeing. PHC is people-centred rather than disease-centred. It is a whole-of-society approach that includes health promotion, disease prevention, treatment, rehabilitation and palliative care. Primary health care and continuous quality improvement: An evidence-based guide provides an accessible, contemporary guide on implementing continuous quality improvement (CQI) in PHC settings. The authors draw together two decades of practical experience and established leadership in Aboriginal and Torres Strait Islander health in Australia to provide guidance for health services and their staff, policymakers, researchers, funders and support organisations in an international context. Primary health care and continuous quality improvement provides an in-depth understanding of how CQI can be used to strengthen health systems by identifying core concepts underpinning CQI in PHC and how CQI can improve health care quality, health equity and population health, explaining how CQI data is used in a comprehensive approach to PHC to measure quality and how data is generated and used for improving care, describing CQI tools and techniques used by PHC teams, offering guidance in interpreting data and addressing variation in care quality.

providing case studies in maternal health children s health mental health and other areas to describe the application of CQI to improve clinical care guiding practitioners on how to collaborate and build data systems for CQI and strengthen links between communities and PHC services Continuous quality improvement is everybody s business and Primary health care and continuous quality improvement explains the strategic use of CQI at different levels of the health system and across sectors to achieve and sustain large scale health improvement
