Oxford's Savilian Professors of Geometry Robin Wilson, 2022-01-10 The Savilian Professorships in Geometry and Astronomy at Oxford University were founded in 1619 by Sir Henry Savile distinguished scholar and Warden of Merton College The Geometry chair in particular is the earliest University based mathematics professorship in England predating the first Cambridge equivalent by about sixty years To celebrate the 400th anniversary of the founding of the geometry chair a meeting was held at the Bodleian Library in Oxford and the talks presented at this meeting have formed the basis for this fully edited and lavishly illustrated book which outlines the first 400 years of Oxford's Savilian Professors of Geometry Starting with Henry Briggs the co inventor of logarithms this volume proceeds via such figures as John Wallis a founder member of the Royal Society and Edmond Halley via the 19th century figures of Stephen Rigaud Baden Powell Henry Smith and James Joseph Sylvester to the 20th century and the present day Oxford's Savilian Professors of Geometry The First 400 Years assumes no mathematical background and should therefore appeal to the interested general reader with an interest in mathematics and the sciences It should also be of interest to anyone interested in the history of mathematics or of the development of Oxford and its namesake university To all of these audiences it offers portraits of mathematicians at work and an accessible exposition of historical mathematics in the context of its times

Starry Reckoning: Reference and Analysis in Mathematics and Cosmology Emily Rolfe Grosholz, 2016-11-25 This book deals with a topic that has been largely neglected by philosophers of science to date the ability to refer and analyze in tandem On the basis of a set of philosophical case studies involving both problems in number theory and issues concerning time and cosmology from the era of Galileo Newton and Leibniz up through the present day the author argues that scientific knowledge is a combination of accurate reference and analytical interpretation In order to think well we must be able to refer successfully so that we can show publicly and clearly what we are talking about And we must be able to analyze well that is to discover productive and explanatory conditions of intelligibility for the things we are thinking about The book's central claim is that the kinds of representations that make successful reference possible and those that make successful analysis possible are not the same so that significant scientific and mathematical work typically proceeds by means of a heterogeneous discourse that juxtaposes and often superimposes a variety of kinds of representation including formal and natural languages as well as more iconic modes It demonstrates the virtues and necessity of heterogeneity in historically central reasoning thus filling an important gap in the literature and fostering a new timely discussion on the epistemology of science and mathematics
