The Material Point Method for Geotechnical Engineering James Fern, Alexander Rohe, Kenichi Soga, Eduardo Alonso, 2019-01-30. This practical guide provides the best introduction to large deformation material point method (MPM) simulations for geotechnical engineering. It provides the basic theory, discusses the different numerical features used in large deformation simulations and presents a number of applications providing references, examples and guidance when using MPM for practical applications. MPM covers problems in static and dynamic situations within a common framework. It also opens new frontiers in geotechnical modelling and numerical analysis. It represents a powerful tool for exploring large deformation behaviours of soils, structures and fluids and their interactions such as internal and external erosion and post liquefaction analysis. For instance, the post failure liquid like behaviours of landslides, penetration problems such as CPT and pile installation and scouring problems related to underwater pipelines. In the recent years, MPM has developed enough for its practical use in industry apart from the increasing interest in the academic world.
