The Perceptual Structure of Sound Dik J. Hermes, 2023-06-10 This book presents a comprehensive review of how acoustic waves are processed by the auditory system into structured sounds such as musical melodies speech utterances or environmental sounds After an introduction an overview is given of how the ears distribute acoustic information over a large array of frequency channels that contain the auditory information used by the central nervous system to generate a mental image of what is happening around the listener This process called auditory scene analysis consists of two stages In the first

stage auditory units are formed such as musical tones and speech syllables Each auditory unit is perceived at a well defined moment in time the beat location of that auditory unit Moreover from this process of auditory unit formation the auditory attributes of these auditory units emerge such as their timbre their pitch their loudness and their perceived location Each of these attributes is discussed in the corresponding chapter In the second stage of auditory scene analysis auditory stream formation the successive auditory units are integrated into auditory streams i e temporally structured sequences of auditory units that are perceived as emanating from one and the same sound source Examples of such auditory streams are musical melodies and the utterances of one speaker The temporal structure of an auditory stream its rhythm is determined by the beat locations of its auditory units The role played by the auditory attributes of the consecutive auditory units is discussed The melodies of musical streams and the intonation contours of spoken utterances emerge from this process In music the beats of parallel streams generally fit into a metric pattern and depending on harmony simultaneous tones can be perceived as consonant or dissonant Finally the book contains many sound examples including the MATLAB scripts with which they are generated

Modelwork Martin Brückner, Sandy Isenstadt, Sarah Wasserman, 2021-10-12 How making models allows us to recall what was and to discover what still might be Whether looking inward to the intricacies of human anatomy or outward to the furthest recesses of the universe expanding the boundaries of human inquiry depends to a surprisingly large degree on the making of models In this wide ranging volume scholars from diverse fields examine the interrelationships between a model's material foundations and the otherwise invisible things it gestures toward underscoring the pivotal role of models in understanding and shaping the world around us Whether in the form of reproductions interpretive processes or constitutive tools models may bridge the gap between the tangible and the abstract By focusing on the material aspects of models including the digital ones that would seem to displace their analogue forebears these insightful essays ground modeling as a tactile and emphatically humanistic endeavor With contributions from scholars in the history of science and technology visual studies musicology literary studies and material culture this book demonstrates that models serve as invaluable tools across every field of cultural development both historically and in the present day Modelwork is unique in calling attention to modeling's duality a dynamic exchange between imagination and matter This singular publication shows us how models shape our ability to ascertain the surrounding world and to find new ways to transform it Contributors Hilary Bryon Virginia Tech Johanna Drucker UCLA Seher Erdo an Ford Temple U Peter Galison Harvard U Lisa Gitelman New York U Reed Gochberg Harvard U Catherine Newman Howe Williams College Christopher J Lukasik Purdue U Martin Scherzinger New York U Juliet S Sperling U of Washington Annabel Jane Wharton Duke U
