Hedge Fund Returns Christian Alexander Wegener, 2011 The present work advances the research on hedge fund returns in three main areas Firstly their statistical properties are assessed in order to understand by what degree the returns of this alternative asset class are subject to non normality autocorrelation and heteroscedasticity Secondly state of the art econometric approaches are used for the purpose of analyzing whether and to what extent monthly hedge fund returns are forecastable Thirdly an effort is made to identify and explain which economic risks affect the performance of the different hedge fund strategy styles in which way The empirical results suggest that monthly hedge fund returns are forecastable by means of multivariate regression models which rely on economic predictors such as changes in interest rates or changes in business outlooks Accounting for the fact that hedge fund returns are non normally distributed heteroscedastic and time varying in their exposure to pervasive risk factors the devised econometric models are found to deliver significant out of sample predictive power The thesis at hand also documents that the interdependencies between the monthly changes of envisaged risk factors and the subsequent hedge fund returns remain remarkably stable throughout time In essence the performance of hedge funds appears to be sensitive to common business cycle movements Altogether the results are relevant to researchers in search of a description and application of contemporary return prediction methods as well as to investors in need of a better understanding of the drivers of hedge fund returns

Portfolio Theory and Management H. Kent Baker, Greg Filbeck, 2013-01-07 Portfolio management is an ongoing process of constructing portfolios that balances an investor's objectives with the portfolio manager's expectations about the future This dynamic process provides the payoff for investors Portfolio management evaluates individual assets or investments by their contribution to the risk and return of an investor's portfolio rather than in isolation This is called the portfolio perspective Thus by constructing a diversified portfolio a portfolio manager can reduce risk for a given level of expected return compared to investing in an individual asset or security According to modern portfolio theory MPT investors who do not follow a portfolio perspective bear risk that is not rewarded with greater expected return Portfolio diversification works best when financial markets are operating normally compared to periods of market turmoil such as the 2007 2008 financial crisis During periods of turmoil correlations tend to increase thus reducing the benefits of diversification Portfolio management today emerges as a dynamic process which continues to evolve at a rapid pace The purpose of Portfolio Theory and Management is to take readers from the foundations of portfolio management with the contributions of financial pioneers up to the latest trends emerging within the context of special topics The book includes discussions of portfolio theory and management both before and after the 2007 2008 financial crisis This volume provides a critical reflection of what worked and what did not work viewed from the perspective of the recent financial crisis Further the book is not restricted to the U S market but takes a more global focus by

highlighting cross country differences and practices This 30 chapter book consists of seven sections These chapters are 1 portfolio theory and asset pricing 2 the investment policy statement and fiduciary duties 3 asset allocation and portfolio construction 4 risk management V portfolio execution monitoring and rebalancing 6 evaluating and reporting portfolio performance and 7 special topics
