Mediterranean

Architecture and the Green-Digital Transition Ali Sayigh, 2023-10-09 This book contains selected papers presented during the World Renewable Energy Network's biannual World Med Green Forum MGF. The 2022 MGF highlights the role of renewable energy applications in the sustainable building sector with a focus on the Mediterranean region as a foundation for a truly positive energy future. MGF is an open roundtable for an international community of researchers, practitioners, and experts to discuss the most innovative and promising sustainable building technologies. The papers presented explore the intersection between twin transitions in policies, programs, projects, and experimentation with the digital domain, innovating the green building sector towards more reliable and inclusive planning and design practices in order to collectively envision future buildings and cities.

City of Well-being Hugh Barton, 2016-11-10 *City of Well-being* provides a radical and holistic introduction to the science and art of town planning. It starts from the premise that the purpose of planning is the health, well-being, and sustainable quality of life of people. Drawing on current and historic examples, it offers inspiration, information, and an integrated perspective which challenges all professions and decision makers that affect the urban environment. It is both authoritative and readable, designed for students, practitioners, politicians, and civil society. The science: Summarizing the most recent research, the book demonstrates the interrelationships between the huge issues of obesity, unhealthy lifestyles, inequality, mental illness, climate change, and environmental quality. The radical implications for transport, housing, economic, social, and energy policies are spelt out. The art and politics: The book examines how economic development really happens and how spatial decisions reinforce or undermine good intentions. It searches for the creative strategies, urban forms, and neighbourhood designs that can marry the ideal with the real. The relationship of planning and politics is tackled head on, leading to conclusions about the role of planners, communities, and development agencies in a pluralistic society. Healthy planning principles could provide a powerful logical motivation for all practitioners.

Inclusive Urban Development in the Global South Andrea Rigon, Vanesa Castán Broto, 2021-05-16 *Inclusive Urban Development in the Global South* emphasizes the importance of the neighbourhood in urban development planning with case studies aimed at transforming current intervention practices towards more inclusive and just means of engagement with individuals and communities. The chapters explore how diversity of gender, class, race, and ethnicity, citizenship status, age, ability, and sexuality is taken or not taken into account and approached in the planning and implementation of development policy and interventions in poor urban areas. The book employs a practical perspective on the deployment of theoretical critiques of intersectionality and diversity in development practice through case studies examining issues such as water and sanitation planning in Dhaka, indigenous rights to the city in Bolivia, post-colonial planning in Hong Kong, land reform in Zimbabwe, and many more. The book focuses on radical alternatives with the potential to foster urban transformations for planning and development communities working around the world.

Green Wedge Urbanism Fabiano Lemes de Oliveira, 2017-02-23 As towns and cities worldwide deal with fast increasing land pressures while also trying to promote more sustainable, connected communities, the creation of

green spaces within urban areas is receiving greater attention than ever before At the same time the value of the green belt as the most prominent model of green space planning is being widely questioned and an array of alternative models are being proposed This book explores one of those alternative models the green wedge showing how this offers a successful model for integrating urban development and nature in existing and new towns and cities around the world Green wedges considered here as ducts of green space running from the countryside into the centre of a city or town are not only making a comeback in urban planning but they have a deeper history in the twentieth century than many expect a history that provides valuable insight and lessons in the employment of networked green spaces in city design and regional planning today Part history and part contemporary argument this book first examines the emergence and global diffusion of the green wedge in town planning in the late 19th and early 20th centuries placing it in the broader historic context of debates and ideas for urban planning with nature before going on to explore its use in contemporary urban practice Examining their relation to green infrastructures landscape ecology and landscape urbanism and their potential for sustainable cities it highlights the continued relevance of a historic idea in an era of rapid climate change Advances in the Leading Paradigms of Urbanism and their Amalgamation Simon Elias Bibri, 2020-06-20 This book explores the recent advances in the leading paradigms of urbanism namely compact cities eco cities and data driven smart cities and the evolving approach to their amalgamation under the umbrella term of smart sustainable cities It addresses these advances by investigating how and to what extent the strategies of compact cities and eco cities and their merger have been enhanced and strengthened through new planning and development practices and are being supported and leveraged by the applied solutions pertaining to data driven smart cities The ultimate goal is to advance sustainability and harness its synergistic effects on multiple scales This entails developing and implementing more effective approaches to the balanced integration of the three dimensions of sustainability as well as to producing combined effects of the strategies and solutions of the prevailing approaches to urbanism that are greater than the sum of their separate effects in terms of the tripartite value of sustainability Sustainable urban development is today seen as one of the keys towards unlocking the quest for a sustainable world And the big data revolution is set to erupt in cities throughout the world heralding an era where instrumentation datafication and computation are increasingly pervading the very fabric of cities and the spaces we live in thanks to the IoT Big data and the IoT technologies are seen as powerful forces that have tremendous potential for advancing urban sustainability Indeed they are instigating a massive change in the way sustainable cities can tackle the kind of special conundrums wicked problems and significant challenges they inherently embody as complex systems They offer a multitudinous array of innovative solutions and sophisticated approaches informed by groundbreaking research and data driven science As such they are becoming essential to the functioning of sustainable cities Besides yet knowing to what extent we are making progress towards sustainable cities is problematic adding to the fragmented conflicting picture that arises of change on the ground in the face of the escalating rate and scale of urbanization

and in the light of emerging ICT and its novel applications In a nutshell new circumstances require new responses This timely and multifaceted book is intended for a wide readership As such it will appeal to researchers academics urban scientists urbanists planners designers policy makers and futurists as well as all readers interested in sustainable cities and their ongoing and future data driven transformation

Green Oslo Per Gunnar Røe, 2016-04-22 As urban regions face the demand to decrease fossil fuel dependency many cities in the developing world are undertaking initiatives designed to create a greener city by aiming for a more sustainable form of urban development and to do so they need to evaluate existing modes of transportation and patterns of land use Focusing on Oslo an early leader in urban environmental policy making and a European green city award winner it argues that this evaluation must adopt and integrate two approaches firstly as a process of ecological modernization based on a combination of transit densification and mixed use development and secondly as an opportunity to reconsider the character and substance of the built environment as a reflection of natural values landscapes and natural resources of the wider region Environmental debate and concern is widespread in Oslo and this is reflected in its earlier planning decisions to leave intact large forest reserves its successful ecological restoration of the Oslo fjord the importance of outdoor culture among its residents the relatively progressive political agenda of Norway This book provides an opportunity for a critical assessment of the limitations and opportunities inherent in green Oslo and suggests the need for much broader integrative approaches It concludes by highlighting lessons which other cities might learn from Oslo

Sustainability Today C. A. Brebbia, 2012 this book contains additional research papers submitted for a meeting on sustainable development and planning organized in 2011 by the Wessex Institute of Technology WIT WIT has a long and very successful record of organizing conferences on the topic of sustainability which requires an interdisciplinary approach Any sustainable solutions that are derived solely from the perspective of a single discipline may have unintended damaging consequences that create new problems Thus effective sustainable solutions require the collaboration of scientists and engineers from various disciplines as well as planners architects environmentalists policy makers and economics These experts must not only communicate with each other effectively but also understand the social aspects of the problem at hand The contents of the book reflect that interdisciplinary approach The topics covered by the papers in the book include City Planning Regional Planning Social and Political Issues Sustainability in the Built Environment Rural Development Cultural Heritage Transportation Ecosystems Analysis Protection and Remediation Environmental Management Environmental Impact Assessment Indicators of Sustainability Sustainable Solutions in Developing Countries Sustainable Tourism Waste Management Flood Risk Management Resources Management Industrial Developments
