Imagination Renée Tobe,2016-08-25 Films use architecture as visual shorthand to tell viewers everything they need to know about the characters in a short amount of time Illustrated by a diverse range of films from different eras and cultures this book investigates the reciprocity between film and architecture Using a phenomenological approach it describes how we the viewers can learn how to read architecture and design in film in order to see the many inherent messages Architecture s representational capacity contributes to the plausibility or reality possible in film The book provides an ontological understanding that clarifies and stabilizes the reciprocity of the actual world and a filmic world of illusion and human imagination thereby shedding light on both film and architecture *Atari Design* Raiford Guins,2020-11-12 Drawing from

deep archival research and extensive interviews Atari Design is a rich historical study of how Atari s industrial and graphic designers contributed to the development of the video game machine Innovative game design played a key role in the growth of Atari from Pong to Asteroids and beyond but fun challenging and exciting game play was not unique to the famous Silicon Valley company What set it apart from its competitors was innovation in the coin op machine s cabinet Atari did not just

make games it designed products for environments With tasteful packaging Atari exceeded traditional locations like bars amusement parks and arcades developing the look and feel of their game cabinets for new locations such as fast food restaurants department stores country clubs university unions and airports making game play a ubiquitous social and cultural experience By actively shaping the interaction between user and machine overcoming styling limitations and generating a distinct corporate identity Atari designed products that impacted the everyday visual and material culture of the late 20th century Design was never an afterthought at Atari

The Metabolist Imagination William O. Gardner, 2020-04-14

Japan's postwar urban imagination through the Metabolism architecture movement and visionary science fiction authors The devastation of the Second World War gave rise to imaginations both utopian and apocalyptic In Japan a fascinating confluence of architects and science fiction writers took advantage of this space to begin remaking urban design In *The Metabolist Imagination* William O. Gardner explores the unique Metabolism movement which allied with science fiction authors to foresee the global cities that would emerge in the postwar era This first comparative study of postwar Japanese architecture and science fiction builds on the resurgence of interest in Metabolist architecture while establishing new directions for exploration Gardner focuses on how these innovators created unique versions of shared concepts including futurity megastructures capsules and cybercities making lasting contributions that resonate with contemporary conversations around cyberpunk climate change anime and more *The Metabolist Imagination* features original documentation of collaborations between giants of postwar Japanese art and architecture such as the landmark 1970 Osaka Expo It also provides the most sustained English language discussion to date of the work of Komatsu Saky considered one of the big three authors of postwar Japanese science fiction These studies are underscored by Gardner's insightful approach treating architecture as a form of speculative fiction while positioning science fiction as an intervention into urban design making it a necessary read for today's visionaries

Architecture and Science-Fiction Film David T. Fortin, 2016-12-05

The home is one of our most enduring human paradoxes and is brought to light tellingly in science fiction SF writing and film However while similarities and crossovers between architecture and SF have proliferated throughout the past century the home is often overshadowed by the spectacle of otherness The study of the familiar home within the alien SF creates a unique cultural lens through which to reflect on our current architectural condition SF has always been linked with alienation however the conditions of such alienation and hence notions of home have evidently changed There is often a perceived comprehension of the familiar that atrophies the inquisitive and interpretive processes commonly activated when confronting the unfamiliar Thus by utilizing the estranging qualities of SF to look at a concept inherently linked to its perceived opposite the home a unique critical analysis with particular relevance for contemporary architecture is made possible

Plastics

Stephan Engelsmann, Valerie Spalding, Stefan Peters, 2012-11-05

Plastics are high performance materials of wide use in the built environment Their versatile technical properties are particularly fascinating A broad range of form giving and finishing

processes makes plastic especially interesting for complex geometries in combination with digital planning processes Following the pioneering plastic structures of the 1970s a number of spectacular buildings have in recent years highlighted the outstanding technical and aesthetic potential of the material Until now however there has been no systematic treatment of the use of plastic in architecture This book seeks to fill that gap by providing an introduction to the structural and design possibilities of plastic It introduces the material and its specific characteristics describes various types of plastic in terms of their relevance for building explains processing technologies and presents typical products and components A concise presentation of twenty five international built projects organized by the type of application and the plastic involved documents the broad range of plastic in architecture Finally a look ahead at the future describes the current state of the art in materials research

Parasite Paradise Liesbeth Melis, 2003 Parasites are flexible and temporary structures designed by artists or architects that feed off of existing infrastructure Parasite Paradise documents 23 projects that respond on their own terms to new and unforeseen demands Many of these parasites have settled in the government designated Vinex district of Leidsche Rijn near Utrecht turning a district almost exclusively concerned with dwelling into a more urban entity What do these small mobile architectural interventions mean for our strictly regulated society and for the planning of architecture and urbanism What sense or nonsense is there in mobile architecture from a historical perspective How much of it is art and how much is architecture Parasite Paradise encourages us to consider a new approach to planning one where not everything is fixed beforehand This makes it required reading for architects urban planners and artists whose concern is designing urban space With projects by Shigeru Ban Atelier van Lieshout Vito Acconci Alicia Framis Dominique Gonzalez Foerster Martial Galfione Kathrin B hm Stefan Saffer with Andreas Lang Attila Foundation Winter H rbelt and others

FX, 2003 **Dwell**, 2004 Form Function Finland, 2003 **Architecture and Dystopia** Dario Donetti, 2020-02-08 A homage to the 1973 publication of *Architecture and Utopia* by Manfredo Tafuri echoed in the title this book is devoted to the radical experiences of the 1960s and to their consequences for the most recent developments in contemporary architecture As a response to the profound crisis of Western culture the emerged in the 1960s radical artists from Italy Austria England and Japan called into question the foundations of modernist utopias They transmuted the difficulties of capitalism into a repertory of startling images that revealed the disturbing realities of consumer society even in those places still resistant to the penetration of modern architecture such as Superstudio and Archizoom s Florence Their model though exhausted in the space of experimentation went on to inspire a generation of architects from the High Tech movement to Rem Koolhaas who sought to employ the paradigm of dystopia as both a visionary and a constructive method one which could operate on the architecture of late capitalism and generate unexpected possibilities for urban planning In the light of these examples how to define a unified dystopian method of design i e a common ground for an architecture that

by its very nature seems to resist systematization Are the most recognizable architectural expressions of this theoretical framework characterized by brazen displays of technology and structures of overwhelming scale merely isolated cases albeit of particular iconic power Or do they belong to a wider landscape of antirational architectural projects And to what extent are these disturbing expressions premised on the utopian tradition or better yet the conceptual model of negative thought The goal of this book is to respond to such questions thus initiating an open dialogue about the legitimacy of this critical category With contributions by Dario Donetti Marco De Michelis Oliver Elser Dominique Rouillard Marco Biraghi Marie Theres Stauffer Maddalena Scimemi Simon Sadler Massimiliano Savorra and Anthony Vidler
