,1854 **Geographic Information Systems to Spatial Data Infrastructures** Ian Masser, 2019-09-25 This book draws on author's wealth of knowledge working on numerous projects across many countries. It provides a clear overview of the development of the SDI concept and SDI worldwide implementation and brings a logical chronological approach to the linkage of GIS technology with SDI enabling data. The theory and practice approach help understand that SDI development and implementation is very much a social process of learning by doing. The author masterfully selects main historical developments and updates them with an analytical perspective promoting informed and responsible use of geographic information and geospatial technologies for the benefit of society from local to global scales. Features Subject matter spans thirty years of the development of GIS and SDI. Brings a social science perspective into GIS and SDI debates that have been largely dominated by technical considerations. Based on a world wide perspective as a result of the author's experience and research in the USA, Australia, Canada, Brazil, Peru, China, India, Korea, Malaysia, and Japan as well as most European countries. Draws upon professional and academic experience relating to pioneering UK and European GIS research initiatives. Includes updated historical material with an analytical perspective explaining what was done right and what didn't work. *European Geographic Information Infrastructures* Peter A. Burrough, I. Masser, 2003-05-20 Although it is generally accepted that there is a growing demand for multinational and pan-European databases, there is little available on the problems encountered in different types of multinational geographic information applications nor has there been much discussion of the broader legal and constitutional issues involved at the supranational.
