Geological Engineering:

Geological Engineering Luis Gonzalez de Vallejo, Mercedes Ferrer, 2011-07-06 A thorough knowledge of geology is essential in the design and construction of infrastructures for transport buildings and mining operations while an understanding of geology is also crucial for those working in urban territorial and environmental planning and in the prevention and mitigation of geohazards Geological Engineering provides an inte **Engineering Geology and Geological Engineering for Sustainable Use of the Earth's Resources, Urbanization and Infrastructure Protection from Geohazards** Janusz Wasowski, Daniele Giordan, Piernicola Lollino, 2017-07-11 The ongoing population growth is resulting in rapid urbanization new infrastructure development and increasing demand for the Earth's natural resources e.g. water oil gas minerals This together with the current climate change and increasing impact of natural hazards imply that the engineering geology profession is called upon to respond to new challenges It is recognized that these challenges are particularly relevant in the developing and newly industrialized regions The idea beyond this volume is to highlight the role of engineering geology and geological engineering in fostering sustainable use of the Earth's resources smart urbanization and infrastructure protection from geohazards We selected 19 contributions from across the globe 16 countries five continents which cover a wide spectrum of applied interdisciplinary and multidisciplinary research from geology to engineering By illustrating a series of practical case studies the volume offers a rather unique opportunity to share the experiences of engineering geologists and geological engineers who tackle complex problems working in different environmental and social settings The specific topics addressed by the authors of chapters included in the volume are the following pre design site investigations physical and mechanical properties of engineering soils novel affordable sensing technologies for long term geotechnical monitoring of engineering structures slope stability assessments and monitoring in active open cast mines control of environmental impacts and hazards posed by abandoned coal mines assessment of and protection from geohazards landslides ground fracturing coastal erosion applications of geophysical surveying to investigate active faults and ground instability numerical modeling of seabed deformations related to active faulting deep geological repositories and waste disposal aquifer assessment based on the integrated hydrogeological and geophysical investigation use of remote sensing and GIS tools for the detection of environmental hazards and mapping of surface geology This volume is part of the proceedings of the 1st GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures Egypt 2017 *Engineering Geology* Richard E. Goodman, 1993-01-18 Provides a concrete understanding of the basic facts and experiences relating to the different behavior of rock types in engineering construction Geological fundamentals are developed in a practical context based on actual cases and experiences of the author Emphasis is placed on rocks found in civil mining and geological engineering especially those with special problems **Education and Training in Geo-Engineering Sciences** Iacint Manoliu, Nicoleta Radulescu, 2008-05-20 Covering a broad range of topics curricular

Information Technology in Geo-engineering D. G. Toll, Hehua Zhu, Xiaojun Li, 2010 Information technology IT is now intrinsic to many aspects of our lives and this is no less so for the field of geo engineering where it is widely used This volume presents the proceedings of the First International Conference on Information Technology in Geo Engineering in Shanghai September 2010 The conference brought together engineers scientists researchers and educators to review new developments and IT advances in geo engineering and provided a forum for the discussion of future trends Information technology evolves constantly and the innovative concepts strategies and technologies which have sprung up are becoming ever more important to all aspects of geo engineering facilitating design processes improving construction efficiency and lowering maintenance costs These topics are among the many addressed here Of interest to all those involved in the field of geo engineering it is hoped that this volume will prove to be the first of a series to cover regular international conference on this increasingly important subject

Aquananotechnology David E. Reisner, T. Pradeep, 2014-09-24 The world's fresh water supplies are dwindling rapidly even wastewater is now considered an asset By 2025 most of the world's population will be facing serious water stresses and shortages Aquananotechnology Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies produced water from fracking ballast water and more It also discusses membranes desalination sensing engineered polymers magnetic nanomaterials electrospun nanofibers photocatalysis endocrine disruptors and Al₁₃ clusters It explores physics based phenomena such as subcritical water and cavitation induced sonoluminescence and fog harvesting With contributions from experts in developed and developing countries including those with severe contamination such as China India and Pakistan the book's content spans a wide range of the subject areas that fall under the aquananotechnology banner either squarely or tangentially The book strongly emphasizes sorption media with broad application to a myriad of contaminants both geogenic and anthropogenic keeping in mind that it is not enough for water to be potable it must also be palatable
