   Geometric Modeling with Splines Elaine Cohen,Richard F. Riesenfeld,Gershon Elber,2001-07-18 Written by researchers who have helped found and shape the field this book is a definitive introduction to geometric modeling The authors present all of the necessary techniques for curve and surface representations in computer aided modeling with a focus on how the techniques are used in design   *An Introduction to Splines for Use in Computer Graphics and Geometric Modeling* Richard H. Bartels,John C. Beatty,Brian A. Barsky,1995-09 As the field of computer graphics develops techniques for modeling complex curves and surfaces are increasingly important A major technique is the use of parametric splines in which a curve is defined by piecing together a succession of curve segments and surfaces are defined by stitching together a mosaic of surface patches An Introduction to Splines for Use in Computer Graphics and Geometric Modeling discusses the use of splines from the point of view of the computer scientist Assuming only a background in beginning calculus the authors present the material using many examples and illustrations with the goal of building the reader s intuition Based on courses given at the University of California Berkeley and the University of Waterloo as well as numerous ACM Siggraph tutorials the book includes the most recent advances in computer aided geometric modeling and design to make spline modeling techniques generally accessible to the computer graphics and geometric modeling communities   **Geometric Modeling** Hans Hagen,Dieter Roller,2012-12-06 This book is based on lectures presented at an international workshop on geometric modeling held at Hewlett Packard GmbH in Boblingen FRG in June 1990 International experts from academia and industry were selected to speak on the most interesting topics in geometric modeling The resulting papers published in this volume give a state of the art survey of the relevant problems and issues The following topics are discussed Methods for constructing surfaces on surfaces four different solutions to the multidimen sional problem of constructing an interpolant from surface data are provided Surfaces in solid modeling current results on the implementation of free fonn solids in three well established solid models are reviewed Box splines and applications an introduction to box spline methods for the representation of surfaces is given Basic properties of box splines are derived and refinement and evaluation methods for box splines are presented in detail Shape preserving properties the construction of non rectangular box spline surfaces applications to surface modeling and imbedding problems are discussed Advanced computer graphics techniques for volume visualization the steps to be executed in the visualization process of volume data are described and tools are discussed that assist in handling this data Rational B splines an introduction to the representation of curves and surfaces using rational B splines is given together with a critical evaluation of their potential for industrial application   *Geometric Modeling and Mesh Generation from Scanned Images* Yongjie Jessica Zhang,2018-09-03 Cutting Edge Techniques to Better Analyze and Predict Complex Physical Phenomena Geometric Modeling and Mesh Generation from Scanned Images shows how to integrate image processing geometric modeling and mesh generation with the finite element method FEM to solve problems
