Interdisciplinarity for the 21st Century Bharath Sriraman, Viktor Freiman, 2010-11-01 Interdisciplinarity has become increasingly important for emergent professions of the 21st century yet there is a dearth of systematic studies aimed at implementing it in the school and university curricula The Mathematics and its Connections to the Arts and Sciences MACAS group places Mathematics as a vehicle through which deep and meaningful connections can be forged with the Arts and the Sciences and as a means of promoting interdisciplinary and transdisciplinary thinking traits amongst students The Third International Symposium held by the MACAS group in Moncton Canada in 2009 included numerous initiatives and ideas for interdisciplinarity that are implementable in both the school and university setting The chapters in this book cover interdisciplinary links with mathematics found in the domains of culture art aesthetics music cognition history philosophy

Handbook of Discrete and Computational Geometry Csaba D. Toth,Joseph O'Rourke,Jacob E. Goodman,2017-11-22 The Handbook of Discrete and Computational Geometry is intended as a reference book fully accessible to nonspecialists as well as specialists covering all major aspects of both fields The book offers the most important results and methods in discrete and computational geometry to those who use

them in their work both in the academic world as researchers in mathematics and computer science and in the professional world as practitioners in fields as diverse as operations research molecular biology and robotics Discrete geometry has contributed significantly to the growth of discrete mathematics in recent years This has been fueled partly by the advent of powerful computers and by the recent explosion of activity in the relatively young field of computational geometry This synthesis between discrete and computational geometry lies at the heart of this Handbook A growing list of application fields includes combinatorial optimization computer aided design computer graphics crystallography data analysis error correcting codes geographic information systems motion planning operations research pattern recognition robotics solid modeling and tomography

The Subtlety of Sameness Robert Matthew French, 1995 The research described in this book is based on the premise that human analogy making is an extension of our constant background process of perceiving in other words that analogy making and the perception of sameness are two sides of the same coin Foreword by Daniel Dennett While it is fashionable today to dismiss the bad old days of artificial intelligence and rave about emergent self organizing systems Robert French has created a model of human analogy making that attempts to bridge the gap between classical top down AI and more recent bottom up approaches The research described in this book is based on the premise that human analogy making is an extension of our constant background process of perceiving in other words that analogy making and the perception of sameness are two sides of the same coin At the heart of the author's theory and computer model of analogy making is the idea that the building up and the manipulation of representations are inseparable aspects of mental functioning in contrast to traditional AI models of high level cognitive processes which have almost always depended on a clean separation A computer program called Tabletop forms analogies in a microdomain consisting of everyday objects on a table set for a meal The theory and the program rely on the idea that myriad stochastic choices made on the microlevel can add up to statistical robustness on a macrolevel To illustrate this French includes the results of thousands of runs of his program on several dozen interrelated analogy problems in the Tabletop microworld French's work is exciting not only because it reveals analogy making to be an extension of our complex and subtle ability to perceive sameness but also because it offers a computational model of mechanisms underlying these processes This model makes significant strides in putting into practice microlevel stochastic processing distributed processing simulated parallelism and the integration of representation building and representation processing A Bradford Book

Impacts of Globalization and Innovation in Mathematics

Education Njurai Evelyn, Uworwabayeho, Alphonse, 2024-07-18 In the face of emerging challenges in the field of mathematics education, educators and researchers find themselves navigating the complexities of globalization and innovations. As classrooms become more diverse and educational landscapes evolve, there is a need for an understanding of the multifaceted impacts of these forces. The very essence of mathematics education is shifting, influenced by global trends, cultural dynamics, and technological advancements. It is within this context that **Impacts of Globalization and Innovation in Mathematics Education** offers a profound exploration of the challenges and opportunities that arise in this era. One of the

central predicaments faced by educators and scholars is the dynamic nature of globalization and innovation which introduces unprecedented complexities in mathematics education.
