Alternate segment theorem

The angle that lies between a tangent and a chord is equal to the angle subtended by the same chord in the alternate segment.

Angle at the centre theorem

The angle at the centre is twice the angle at the circumference.

Angles in the same segment theorem

Angles in the same segment are equal.

Angles in a semicircle

The angle in a semicircle is 90 degrees.

Chord of a circle

The perpendicular from the centre of a circle to a chord bisects the chord (splits the chord into two equal parts).

Cyclic quadrilateral

The opposite angles in a cyclic quadrilateral total 180° .

A Combination of Geometry Theorem Proving and Nonstandard Analysis with Application to Newton's Principia Jacques Fleuriot, 2012-09-30 Sir Isaac Newton's *philosophi Naturalis Principia Mathematica* the *Principia* contains a prose style mixture of geometric and limit reasoning that has often been viewed as logically vague In *A Combination of Geometry Theorem Proving and Nonstandard Analysis* Jacques Fleuriot presents a formalization of Lemmas and Propositions from the *Principia* using a combination of methods from geometry and nonstandard analysis The mechanization of the procedures which respects much of Newton's original reasoning is developed within the theorem prover Isabelle The application of this framework to the mechanization of elementary real analysis using nonstandard techniques is also discussed [Geometry and Symmetry](#) L.
