*The Wise Master Builder: Platonic Geometry in Plans of Medieval Abbeys and Cathedrals* Nigel Hiscock, 2018-05-08 This title was first published in 2000 Did the plan of medieval churches have any underlying symbolic meaning This work re opens the debate about the importance of geometry and symbolism in medieval architectural design and argues the case for

attributing an intellectual meaning to the planning of abbeys and cathedrals In challenging prevailing claims for the use of arithmetical ratios in architectural design notably those based on the square root of two Dr Hiscock advances a perspective consisting of proportions derived from the figures of Platonic geometry the square the equilateral triangle and the pentagon and provides evidence for the symbolic interpretation of these figures The investigation further reveals whole series of geometric relationships between some of England s most celebrated Norman cathedrals such as Norwich or Durham together with a wide sample from the Continent from Old St Peter s in Rome to Chartres Cathedral and sets out a comprehensive design method in each case Hiscock first demonstrates the proposition that the ideas of Christian Platonism including number and geometry remained current and were employed in the thought of the early Middle Ages In particular he argues that they can be associated with the leading persons in the 10th century revival of monasticism and that they found expression in the white mantle of churches that spread across Western Europe at the end of the first millennium AD The book then provides a detailed analysis of the geometric proportions of church plans between the 9th and 12th centuries in Germany France and in England This research seeks to demonstrate that a coherent sequence of geometric forms can be seen in these plans forms which correspond to the key figures of Platonic geometry as understood in the context of Christian Platonist thought In conclusion the author shows how the system of design proposed could be set out on site using the known working methods of medieval masons

*In Search of the Unknown in Medieval Architecture* John James, 2007-12-31 John James is an Australian architect and medieval historian Since 1969 he has been searching for the origins of the Gothic style beginning with a five year study of Chartres cathedral At that time there were no coherent techniques for analysing the detailed construction history of existing stone structures This he created He expanded his research to include all the early Gothic churches in the Paris region with a three year survey of over 3500 buildings His most important discovery has been that all churches of this period were constructed in many short campaigns by mobile building teams and that major innovation was more likely to occur in the smaller buildings than in the larger This volume makes available 42 of the author s studies on the development of Gothic architecture in France
