

If two chords intersect inside a circle, then the product of the lengths of the segments on one chord (AB and EC) is equal to the product of the lengths of the other chord (BE and ED).

$$AE \cdot EC = BE \cdot ED$$

If two secants share a common endpoint outside the circle, then the product of the lengths of one secant segment (AC) and its external segment (BC) equals the product of the lengths of the other secant segment (EC) and its external segment (DC).

$$AC \cdot BC = EC \cdot DC$$

If a secant segment and a tangent segment share a common endpoint outside the circle, then the product of the lengths of the secant segment (AC) and its external segment (BC) equals the square of the length of the tangent segment (CD).

$$AC \cdot BC = CD^2$$
