Definition: Angles that share a common endpoint or the common endpoint but not a common ray are adjacent angles. Adjacent angles form a linear pair. Adjacent angles form a straight line.

Example 1:

- Three adjacent angles form a linear pair. The angles are $\angle A$, $\angle B$, and $\angle C$. The angles are $\angle A$, $\angle B$, and $\angle C$. The angles are $\angle A$, $\angle B$, and $\angle C$.

International Perspectives on the Teaching and Learning of Geometry in Secondary Schools Patricio Herbst,Ui Hock Cheah,Philippe R. Richard,Keith Jones,2018-04-27 This book presents current perspectives on theoretical and empirical issues related to the teaching and learning of geometry at secondary schools It contains chapters contributing to three main areas A first set of chapters examines mathematical epistemological and curricular perspectives A second set of chapters presents studies on geometry instruction and teacher knowledge and a third set of chapters offers studies on geometry thinking and learning Specific research topics addressed also include teaching practice learning trajectories learning difficulties technological resources instructional design assessments textbook analyses and teacher education in geometry Geometry remains an essential and critical topic in school mathematics As they learn geometry students develop essential mathematical thinking and visualization skills and learn a language that helps them relate to and interact with the physical world Geometry has traditionally been included as a subject of study in secondary mathematics curricula but it has also featured as a resource in out of school problem solving and has been connected to various human activities such as sports games and artwork Furthermore geometry often plays a role in teacher preparation undergraduate mathematics and at the workplace New technologies including dynamic geometry software computer assisted design software and geometric positioning systems have provided more resources for teachers to design environments and tasks in which students can learn and use geometry In this context research on the teaching and learning of geometry will continue to be a key element on the research agendas of mathematics educators as researchers continue to look for ways to enhance student learning and to understand student thinking and teachers decision making

Interactions on Digital Tablets in the Context of 3D Geometry Learning David Bertolo,2016-07-14 Over the last few years multi touch mobile devices have become increasingly common However very few applications in the context of 3D geometry learning can be found in app stores Manipulating a 3D scene with a 2D device is the main difficulty of such applications Throughout this book the author focuses on allowing young students to manipulate observe and modify 3D scenes using new technologies brought about by digital tablets Through a user centered approach the author proposes a grammar of interactions adapted to young learners and then evaluates acceptability ease of use and ease of learning of the

interactions proposed Finally the author studies in situ the pedagogic benefits of the use of tablets with an app based on the suggested grammar The results show that students are able to manipulate observe and modify 3D scenes using an adapted set of interactions Moreover in the context of 3D geometry learning a significant contribution has been observed in two classes when students use such an application The approach here focuses on interactions with digital tablets to increase learning rather than on technology First defining which interactions allow pupils to realize tasks needed in the learning process then evaluating the impact of these interactions on the learning process This is the first time that both interactions and the learning process have been taken into account at the same time
