The SAGE Handbook of Geomorphology Kenneth J Gregory, Andrew S Goudie, 2011-06-13 Geomorphology is the study of the Earth's diverse physical land surface features and the dynamic processes that shape these features. Examining natural and anthropogenic processes, The SAGE Handbook of Geomorphology is a comprehensive exposition of the fundamentals of geomorphology that examines form, process, and applications of the discipline. Organized into five substantive sections, the Handbook is an overview of Foundations and Relevance including the nature and scope of geomorphology, the origins and development of geomorphology, the role and character of theory in geomorphology, geomorphology and environmental management, and geomorphology and society. Techniques and Approaches including observations and experiments, geomorphological mapping, the significance of models, process and form, dating surfaces and sediment, remote sensing in geomorphology, GIS in geomorphology, biogeomorphology, human activity, Process and Environment including the evolution of regolith, weathering, fluids, flows, and fluxes, sediment transport and deposition, hill slopes, riverine environments, glacial geomorphology, periglacial environments, coastal environments, aeolian environments, tropical environments, karst and karst processes, Environmental Change including landscape evolution and tectonics, interpreting quaternary environments, environmental change, disturbance, and responses to geomorphic systems, Conclusion including challenges and perspectives, and a concluding review. The Handbook has contributions from 48 international authors and was initially organized by the International Association of Geomorphologists. This will be a much used and much cited reference for researchers in Geomorphology, Physical Geography, and the Environmental Sciences. [Geomorphology of Lake-Catchment Systems](#) Kenji Kashiwaya, 2017-07-24 This book presents the study of limnogeomorphology in which past proxy data such as lacustrine sediments with information on landform development can be linked to modern observed data acquired by instruments including hydro geomorphological and sedimentary data. Traditionally in the field of earth sciences it has been thought that geophysical studies dealing mainly with the present process were not smoothly linked to geological studies that originated from historical studies. Although such earth surface process studies are closely related to those on historical landform development in the field of geomorphology, they have been studied separately. Those two geomorphology studies correspond to process geomorphology, dynamic geomorphology, and historical geomorphology. There have been some attempts to combine them, however, they lacked past quantitative records available for further analyses. In the study of limnogeomorphology, proxy data can be converted to quantitative information to be utilized in future environmental discussions. This book also covers information not only on large lake catchment systems but on small systems. Those include long term and short term and large scale and small scale environmental changes in east Eurasia such as Lake Baikal, Lake Khuvsgul, Lake Biwa, and small lakes in Japan, Mongolia, China, and Korea. **Google Earth and Virtual Visualizations in Geoscience Education and Research** Steven J. Whitmeyer, 2012-01-01 GSA Special Paper 492 consists of 35 papers that

collectively synthesize the development and current uses of Google Earth and associated visualization media in geoscience education and research Chapters focus on Google Earth and related tools such as SketchUp Google Fusion Tables GigaPan and LiDAR Many of these papers include digital media that illustrate and highlight important themes of the texts This volume is intended to document the state of the art for geoscience applications of geobrowsers such as Google Earth along with providing provocative examples of where this technology is headed in the future

Geomorphology and River Management Gary J. Brierley, Kirstie A. Fryirs, 2013-04-29 This book outlines a generic set of procedures termed the River Styles Framework which provides a set of tools for interpreting river character behavior condition and recovery potential Applications of the framework generate a coherent package of geomorphic information providing a physical template for river rehabilitation activities management and restoration of rivers is a rapidly growing topic for environmental scientists geologists and ecologists this book provides a learning tool with which to approach geomorphic applications to river management describes the essential geomorphological principles underlying river behaviour and evolution demonstrates how the River Styles Framework can turn geomorphic theory into practice to develop workable strategies for restoration and management based on real case studies and authors extensive experience applicable to river systems worldwide synthesises fluvial geomorphology ecology and management

Structure from Motion in the Geosciences Jonathan L. Carrivick, Mark W. Smith, Duncan J. Quincey, 2016-07-15 Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi temporal data to detect elevation position and volumetric changes that are symptomatic of earth surface processes This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy It then critically reviews current usage of Structure from Motion in the geosciences provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines This book will appeal to academics students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition image processing and data quality assessment and includes case studies that have been contributed by experts from around the world

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of

peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned **General Technical Report RMRS** ,1998 **Horizons in Physical Geography** M.
