Clearing Valery V. Tuchin, Dan Zhu, Elina A. Genina, 2022-02-08 Biomedical photonics is currently one of the fastest growing fields connecting research in physics optics and electrical engineering coupled with medical and biological applications. It allows for the structural and functional analysis of tissues and cells with resolution and contrast unattainable by any other methods. However, the major challenges of many biophotonics techniques are associated with the need to enhance imaging resolution even further to the sub-cellular level as well as translate them for in vivo studies. The tissue optical clearing method uses immersion of tissues into optical clearing agents (OCAs) that reduces the scattering of tissue and makes tissue more transparent, and this method has been successfully used ever since. This book is a self-contained introduction to tissue optical clearing, including the basic principles and in vitro biological applications, from in vitro to in vivo tissue optical clearing methods and combination of tissue optical clearing and various optical imaging for diagnosis. The chapters cover a wide range of issues related to the field of tissue optical clearing: mechanisms of tissue optical clearing in vitro and in vivo; traditional and innovative optical clearing agents; recent achievements in optical clearing of different tissues, including pathological tissues and blood, for optical imaging, diagnosis, and therapy. This book provides a comprehensive account of the latest research and possibilities of utilizing optical clearing as an instrument for improving the diagnostic effectiveness of modern optical diagnostic methods. The book is addressed to biophysicist researchers, graduate students, and postdocs of biomedical specialties, as well as biomedical engineers and physicians interested in the development and application of optical methods in medicine. Key features: The first collective reference to collate all known knowledge on this topic. Edited by experts in the field with chapter contributions from subject area specialists. Brings together the two main approaches in immersion optical clearing into one cohesive book. International organizations and governments want to increase women's participation in military operations and peacebuilding. Gender equality is increasingly seen as the antidote to conflict, a key factor in achieving stability. While feminist activism inspired the emergence of these norms on gender and conflict, they were institutionalized through the Women Peace and Security (WPS) agenda with the military at the forefront of those changes. In *Deploying Feminism*, Stéfanie von Hlatky tells the story of how the military has been delegated authority to advance gender equality as part of their activities while simultaneously tackling increasingly complex threats. Drawing upon fieldwork and interviews, she illustrates how NATO, the world's foremost alliance, has even embedded these ideas in the planning and execution of its missions. For troops deployed on NATO missions, this often means seeking out women in their operating area to improve intelligence-gathering activities. While this helps the mission, does it help women and conflict-affected communities? Because of the military's focus on operational effectiveness above all else, von Hlatky argues that there is a

distortion of WPS norms as gender equality concerns fade into the background Looking at NATO s ongoing operations in Iraq Kosovo and the Baltics Deploying Feminism details the process by which Women Peace and Security norms are militarized and put at the service of operational effectiveness Further it shows why an adjustment is necessary for gender equality to become a true planning priority Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971 New York Public Library.
