Co-verification of Hardware and Software for ARM SoC Design Jason Andrews,2004-09-04 Hardware software co

verification is how to make sure that embedded system software works correctly with the hardware and that the hardware has been properly designed to run the software successfully before large sums are spent on prototypes or manufacturing. This is the first book to apply this verification technique to the rapidly growing field of embedded systems on a chip SoC. As traditional embedded system design evolves into single chip design, embedded engineers must be armed with the necessary information to make educated decisions about which tools and methodology to deploy. SoC verification requires a mix of expertise from the disciplines of microprocessor and computer architecture, logic design and simulation, and C and Assembly language embedded software. Until now, the relevant information on how it all fits together has not been available. Andrews, a recognized expert, provides in depth information about how co verification really works, how to be successful using it, and pitfalls to avoid. He illustrates these concepts using concrete examples with the ARM core, a technology that has the dominant market share in embedded system product design. The companion CD ROM contains all source code used in the design, examples, a searchable e book version, and useful design tools. The only book on verification for systems on a chip SoC on the market. Will save engineers and their companies time and money by showing them how to speed up the testing process while still avoiding costly mistakes. Design examples use the ARM core, the dominant technology in SoC, and all the source code is included on the accompanying CD Rom so engineers can easily use it in their own designs.

Advances in Software Engineering Dominik Ślęzak, Tai-hoon Kim, Akingbehin Kiumi, Tao Jiang, June Verner, Silvia Abrahao, 2009-11-18. As future generation information technology FGIT becomes specialized and fragmented, it is easy to lose sight that many topics in FGIT have common threads and because of this, advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts. Through such hybrid philosophy, a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines. FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT, conducted by separate scientific committees but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications, ASEA Bio Science and Bio Technology, BSBT Control and Automation, CA Database Theory and Application, DTA Disaster Recovery and Business Continuity, DRBC published independently, Future Generation Communication and Networking, FGCN that was combined with Advanced Communication and Networking, ACN Grid and Distributed Computing, GDC Multimedia, Computer Graphics and Broadcasting, MulGraB Security Technology, SecTech Signal Processing, Image Processing and Pattern Recognition, SIP and u and e Service Science and Technology, UNESST. The purpose of the 8th Conference on Software Engineering, Artificial Intelligence Research, Management and Applications, SERA

2010 held on May 24-26 2010 in Montreal Canada was to bring together scientists engineers computer users and students to share their experiences and exchange new ideas and research results about all aspects theory applications and tools of computer and information science and to discuss the practical challenges encountered along the way and the solutions adopted to solve them The conference organizers selected 15 outstanding papers from SERA 2010 all of which you will find in this volume of Springer's Studies in Computational Intelligence
